

Spoken Tutorial on Building a Marketing Slogan Creator

Module	An introduction to Building
Episode	3. Building a Marketing Slogan Creator
Learning Objective	At the end of this tutorial learner will be able to 1. Identify the steps to get a Gemini API key. 2. Explain how to use the Gemini API in Python. 3. Apply Python code to generate marketing slogans. 4. Modify the product topic to create different slogans.
Approx. Duration	3-4 min
Outline	• Getting your Gemini API Key • Understanding the Python code for Gemini API • Running the slogan creator • Challenging yourself with new topics
Meta Tags	Gemini API, Python, Google Colab, AI Studio, Marketing Slogans, Code Generation, AI Tutorial, API Key, Generative AI, Prompt Engineering
Pre-requisite Tutorial	Episode 1,2

Script

Visual Cue	Narration
Title Slide	Welcome to this Spoken Tutorial on Building a Marketing Slogan Creator.
Learning Objectives Slide	In this tutorial, you will learn to, • Get your Gemini API key. • Use the Gemini API with Python. • Generate marketing slogans using Python. • Modify topics to create new slogans.
System Requirements Slide	To follow along, you will need a web browser. Also, a Google account and access to Google Colab .
Pre-requisite Slide	To follow this tutorial, you should have watched Episode 1 and 2 of this module.
Illustration showing API key as a digital passport for secure access	What if you need to enter a restricted area? API keys are like a digital passport. They grant your application access to a specific service. The key tells the service who is making the request. This ensures secure and authorized communication.

Person scratching head, confused at screen, trying to give vague instructions to AI	What if you want AI to create marketing slogans for you? Imagine asking a person for slogans. You might say, 'Give me some slogans for sneakers'. This is a vague request, but a human can understand it. Now, let's see how we make this clear for AI .
Screen close-up: user typing 'Create 5 catchy marketing slogans for eco-friendly sneakers...'	To get precise AI results, we need a clear prompt . In Python , we first define our product. Then we craft a specific prompt . For example: 'Create 5 catchy marketing slogans for eco-friendly sneakers'. Notice how specific the request is.
Side-by-side: vague human request vs explicit AI prompt	A human can understand a vague request. But AI needs explicit instructions. Our Python code translates your idea into a structured prompt . This prompt goes to the Gemini API . This ensures clear communication and relevant output.
Person at laptop, smiling at the screen showing AI-generated slogans for different topics	Your API key and code are now ready. Run the Colab notebook. See how it generates slogans. You can change the 'product_topic' variable. Try 'spicy hot sauce' or 'productivity app'. Explore different ideas with ease.
Summary Slide	Let us summarize what we learned. You learned to get a Gemini API key. We wrote Python code to use the Gemini API . Finally, we built a marketing slogan generator.
Assignment Slide	Here is an assignment for you. Change the product topic in the code. Generate slogans for your own product idea. Compare the results.
