

Spoken Tutorial – The 3 Cs of Prompting

Series: 2 – The Art of the Prompt

Title: The 3 Cs – Clarity, Context, and Constraints

Module	2 – Artificial Intelligence Essentials – Prompting Skills
Episode	5. 3 Cs of Prompting
Learning Objective	At the end of this tutorial learner will be able to 1. Define the 3 Cs of prompting. 2. Explain the role of each C in improving AI outputs. 3. Compare vague and improved prompts. 4. Apply the 3 Cs to write clear, structured prompts.
Approx. Duration	3-4 min
Outline	• What are the 3 Cs? • C1: Clarity • C2: Context • C3: Constraints • Comparing outputs

Pre-requisite Tutorial	Introduction to Prompting

Script

Visual Cue	Narration
Title Slide	Welcome to this Spoken Tutorial on The 3 Cs of Prompting .

Learning Objectives Slide	In this tutorial , you will learn to define, explain, compare, and apply the 3 Cs of prompting .
System Requirements Slide	Here I am using a browser on a computer or mobile .
Pre-requisite Slide	To follow this tutorial, you must be connected to the internet. should also be familiar with what a prompt is. No coding needed.
Person sitting at a laptop, thinking before typing	Have you ever got a strange answer from an AI? That's because of a weak prompt. A weak prompt gets a weak answer. A strong prompt gets a smart answer.
Show graphic to explain Clarity, Context, and Constraints.	Best prompts include three ingredients: 1. Clarity, 2. Context, and 3. Constraints.
Section Header: 1. Clarity	Let's start with the first C — <i>Clarity</i> .
Person at laptop, thought bubble above head, AI with a question mark	The AI can't read your mind. When you explain your thoughts clearly, the AI gives better results.

Icons representing “task”, “topic”, “instructions”, “details”	A clear prompt usually has these elements: • A well-defined task or goal • A clear topic or focus, and • Any special instructions for the AI to follow
Person scratching head, confused at vague instruction	If these aspects are missing, your prompt becomes vague. And vague prompts lead to vague answers.
Screen recording showing browser with different AI tools (ChatGPT, Gemini, Claude)	Lets Open any AI tool — for example, ChatGPT, Gemini, Claude, or the one you usually use. Type a vague prompt in the message box and submit it.
On chatGPT Close-up: user typing “Write about electric cars”	For example, consider this prompt. “Write about electric cars.” What do you think, is this clear or vague?
Pause animation / learner reflection moment	Think about it. What should the AI focus on? Audience? Length? It doesn’t say what aspect to focus on.
AI generating long generic text	The output will be broad and unfocused.
Screen close-up: user typing improved prompt	Now, let’s improve it.

	“Write a short blog post explaining the top 3 benefits of owning an electric car for someone living in a city.”
Side-by-side: vague output vs improved output	See the difference? The output is sharper, more relevant, and structured.
Section Header: 2. Context	Now, let’s move to the second C — Context.
Visuals of audience types (e.g., student, professional, lifestyle blogger)	Context tells the AI why you’re asking and who the audience is. It helps the AI adopt the right perspective.
Screen close-up: user adding context	For example: “Write a short blog post for a lifestyle blog that focuses on sustainable living. Explain the top 3 benefits of owning an electric car for someone living in a city.”
Side-by-side: previous output vs new output	Adding context makes the response more tailored. It understands the purpose and audience.
Section Header: 3. Constraints	Finally, let’s look at the third C — Constraints.
Clock icon, word count icon, style guide visuals	Constraints act like rules. They guide the response by defining length, format, or style.

Screen close-up: user adding constraints	For example: Write a short blog post under 400 words for a lifestyle blog. Focus on sustainable living and city-friendly electric cars. Explain the top 3 benefits of owning one in the city. Use a friendly, enthusiastic tone throughout. End with a question to invite reader comments.
Three outputs shown side by side (vague → context → constraints)	Compare all three outputs now. Adding clarity, context, and constraints improves quality of the output significantly.
Person at laptop, smiling at improved output	Remember: the clearer and more structured your prompt, the better the AI's response will be.
Assignment	Now as an assignment Pick a simple topic like Sports, Dogs, or Healthy Food. • First, write a vague prompt. • Improve it by first adding Clarity to the prompt. Notice the response. • Then add a context to the prompt. Now look at the response and constraints step by step. • Compare the three AI responses.

	Note down which C made the biggest difference to the output.
