

Spoken Tutorial – The 3 Cs of Prompting: Clarity, Context, and Constraints

Title: The 3 Cs of Prompting: Clarity, Context, and Constraints

Module	Artificial Intelligence Essentials
Episode	6. The 3 Cs of Prompting: Clarity, Context, and Constraints
Learning Objective	At the end of this tutorial learner will be able to 1. Define Clarity, Context, and Constraints in prompting. 2. Explain how each C improves AI outputs. 3. Apply the 3 Cs to write effective prompts.
Approx. Duration	3-4 min
Outline	• Welcome • Learning Objectives • System Requirements • Prerequisites • What is a Prompt? • The 3 Cs of Prompting • Clarity: Definition and Example • Context: Definition and Example • Constraints: Definition and Example • Combining the 3 Cs • Summary • Assignment • Thank You
Meta Tags	AI prompting, Clarity, Context, Constraints, prompt engineering, AI outputs, effective prompts, ChatGPT, large language models, LLM
Pre-requisite Tutorial	To follow this tutorial, you must be connected to the internet. You should also be familiar with what a prompt is.

Title slide with 'The 3 Cs of Prompting: Clarity, Context, and Constraints'	Welcome to this Spoken Tutorial. It's about The 3 Cs of Prompting. We'll cover Clarity, Context, and Constraints.
Learning Objectives slide with bullet points	In this tutorial, you'll learn to define Clarity, Context, and Constraints. You'll explain how each C improves AI outputs. And you'll apply them to write effective prompts.
System Requirements slide	Here I'm using a browser on a computer or mobile.
Prerequisites slide	To follow this tutorial, you must be connected to the internet. You should also be familiar with what a prompt is. No coding needed.

Person sitting at a laptop, thinking before typing, with a thought bubble above their head	Remember, a prompt is your instruction to an AI. It tells the AI exactly what to do. A weak prompt gets a weak answer. But a strong prompt gets a smart answer.
Infographic showing three interconnected circles labeled 'Clarity', 'Context', 'Constraints'	So, how do we write strong prompts? We use the 3 Cs. They are Clarity, Context, and Constraints. These Cs help you get better AI results.
Magnifying glass over text, showing a clear, focused word next to a blurry, vague word	Let's start with Clarity. Clarity means being specific and direct. Avoid vague language. Use simple words. The AI can't read your mind.
On ChatGPT. User types 'Tell me about climate change.' AI output shows a very general, long text.	Here's a vague prompt: 'Tell me about climate change.' This is too broad. The AI doesn't know what to focus on.
On ChatGPT. User types 'Explain the main causes of climate change for a 10-year-old.' AI output shows a clear, concise explanation. Side-by-side comparison of vague vs improved outputs.	Now, let's improve it. Try: 'Explain the main causes of climate change for a 10-year-old.' See the difference? It's specific and has a target audience.
A person giving instructions to another person, pointing to a background scene or specific details.	Now, let's move to Context. Context means giving the AI background information. Tell it what it needs to know. Set the scene for the AI. This helps it understand your request better.
On ChatGPT. User types 'Write a short story about a dog.' AI output is a generic story.	Here's a prompt missing context: 'Write a short story about a dog.' What kind of dog? What's the genre? The AI has to guess.
On ChatGPT. User types the improved prompt. AI output is a specific, funny story. Side-by-side comparison of missing context vs with context outputs.	Let's add some context. Try: 'You are a dog trainer. Write a short, funny story about a clumsy golden retriever puppy's first day at obedience school.' We gave it a role and more details.
A person drawing a box or boundary around a task, with text inside like 'Max 200 words', 'Bullet points only'.	Finally, let's look at Constraints. Constraints set boundaries for the AI. Specify things like length, format, or style. You can also tell the AI what NOT to do. This guides its output.
On ChatGPT. User types 'Give me a recipe for chocolate cake.' AI output is a standard recipe, but could be too long or too short for the user's need.	Here's an unconstrained prompt: 'Give me a recipe for chocolate cake.' The AI might give a very long, complex recipe. Or maybe a simple one. We don't know.
On ChatGPT. User types the improved prompt. AI output is a short, bulleted recipe with few ingredients. Side-by-side comparison of unconstrained vs with constraints outputs.	Let's add some constraints. Try: 'Give me a simple recipe for chocolate cake, using only common ingredients. List steps in bullet points, max 5 ingredients.' Now the AI knows exactly what's needed.
Infographic showing the three interconnected circles (Clarity, Context, Constraints) with arrows pointing to a central 'Effective Prompt' text.	We've seen each C. Now, let's combine them. Ask yourself: What exactly do you want? That's Clarity. What background information is needed? That's Context. What are the rules and limits? Those are Constraints.
Summary slide with bullet points summarizing the 3 Cs.	In this tutorial, you learned about the 3 Cs of prompting. Clarity means being specific. Context means providing background. And Constraints mean setting boundaries. Use them for better AI outputs.

Person working on a laptop, with a thought bubble showing a poem.	Here's an assignment for you. Write a prompt for an AI to generate a short poem. Apply Clarity, Context, and Constraints. Then, share it with a friend. See what results you get!
