

Spoken Tutorial – The Anatomy of a Good Prompt (The 3 C's)

Title: The Anatomy of a Good Prompt (The 3 C's)

Module	Prompt Engineering Basics
Episode	2.1 The Anatomy of a Good Prompt (The 3 C's)
Learning Objective	At the end of this tutorial learner will be able to 1. Identify the key ingredients of a good prompt. 2. Apply Clarity, Context, and Constraints to prompts. 3. Construct effective prompts for AI tools. 4. Utilize a persona to enhance AI outputs.
Approx. Duration	3-4 min
Outline	• Introduction to weak prompts. • The 3 C's of prompting: Clarity, Context, Constraints. • Applying Clarity: Making prompts specific. • Applying Context: Providing background information. • Applying Constraints: Setting rules for output. • Bonus Tip: Using a persona in prompts.
Meta Tags	prompt engineering, AI prompts, Clarity, Context, Constraints, persona, effective prompts, AI output, ChatGPT, LLM
Pre-requisite Tutorial	You should be familiar with what a prompt is and how to interact with AI tools.

Visual Cue	Narration
Title slide: 'The 3 C's of Prompting' with Spoken Tutorial and IIT Bombay logos.	Welcome to this Spoken Tutorial on The 3 Cs of Prompting.
Learning Objectives slide with bullet points as listed in content.	In this tutorial, you will learn to identify key ingredients for good prompts. You will also apply Clarity, Context, and Constraints. Finally, you'll construct effective prompts.
System Requirements slide showing a laptop and a mobile phone with a browser open.	Here I am using a browser on a computer or mobile.
Prerequisites slide with icons for internet connection and a thought bubble with 'prompt' inside.	To follow this tutorial, you must be connected to the internet. You should also be familiar with what a prompt is.
Person at a laptop, looking confused at a screen displaying generic text. A thought bubble above their head with a question mark.	Have you ever got a strange answer from an AI? That's because of a weak prompt. A weak prompt gets a weak answer. A strong prompt gets a smart answer.

Infographic showing three interconnected circles labeled Clarity, Context, and Constraints.	The best prompts have three key ingredients. We call them the 3 C's. They are Clarity, Context, and Constraints. Let's explore each one.
A magnifying glass highlighting the word 'Clarity'. An AI robot shrugging, looking confused.	First, let's talk about Clarity. Clarity means being specific. The AI can't read your mind. Vague prompts give generic answers. So, you need to be clear.
Screen recording: User types 'Write about electric cars' into an AI chat interface and submits. AI generates a generic, broad paragraph about electric cars.	Let's see a weak prompt example. Type 'Write about electric cars.' into your AI tool. See the generic output? It's not very helpful.
Screen recording: User types the improved clear prompt into the AI chat. AI generates a focused blog post about urban electric car benefits. Show a quick side-by-side comparison of weak vs. clear output.	Now, let's make it clear. We'll add specific details. Let's try this prompt. 'Write a short blog post explaining the top 3 benefits. This is for owning an electric car. It is for someone living in a city.' See how much better the output is?
An AI robot surrounded by thought bubbles containing background information, like a target audience icon and a 'why' question mark.	Next, let's add Context. Context gives the AI background. It tells the AI why you're asking. It also tells who the audience is. This helps the AI adopt a perspective.
Screen recording: User modifies the previous clear prompt by adding 'for a lifestyle blog that focuses on sustainable living.' AI generates output tailored for that specific blog type.	Let's take our clear prompt. Now, add context to it. We'll specify the blog type. Try this prompt. 'Write a short blog post for a lifestyle blog. It focuses on sustainable living. Explain the top 3 benefits of owning an electric car. This is for someone living in a city.' Notice the improved tone and focus.
An AI robot with a checklist, a ruler, and a clock icon, representing rules and boundaries.	Finally, let's add Constraints. Constraints set the rules. They tell the AI about length. They also specify format and style. This shapes the final output.

Screen recording: User modifies the prompt to add constraints (word count, tone, ending question). AI generates a perfectly constrained blog post, ending with a question.	We have a prompt with clarity and context. Now, let's add constraints. We'll set a word limit. We'll also define the tone. And, we'll ask for a question at the end. Type this prompt. 'Write a short blog post, under 400 words. It is for a lifestyle blog. This blog focuses on sustainable living. Explain the top 3 benefits of owning an electric car. This is for someone living in a city. Use a friendly and enthusiastic tone. End with a question to encourage comments.' See the perfect result!
An AI robot wearing different hats or masks, representing various roles like a chef, a doctor, a teacher.	Here's a bonus tip for you. Provide a Persona. This is a powerful trick. Tell the AI who to be. It helps the AI adopt a role.
Screen recording: User types the persona prompt. AI generates an itinerary, adopting the language and style of a budget travel agent.	Let's see a persona example. Try this prompt. 'Act as an expert travel agent. Specialize in budget travel. Create a 5-day itinerary for a trip to Rome. This is for a solo traveler. They love history and food.' The AI will respond as that persona. This creates highly relevant answers.
Summary slide with bullet points listing the key takeaways of the tutorial.	In this tutorial, you learned about the 3 C's. You identified Clarity, Context, and Constraints. You applied them to improve prompts. And you also learned to use a persona.
A person at a laptop, a thought bubble above their head showing a recipe card and an AI icon.	Here's an assignment for you. Write a prompt to generate a recipe. Make sure to include Clarity. Add Context and Constraints too. Finally, include a Persona. Practice these skills.
