

The Art of the Prompt - A Guide for Everyone

Module:	AI Literacy
Episode:	1. The Art of the Prompt
Learning Objective:	At the end of this tutorial learner will be able to 1. Define what a good prompt entails and explain its importance in interacting with AI tools. 2. Identify key elements that enhance prompt effectiveness, such as clarity, context, and constraints. 3. Construct progressively more effective prompts by applying iterative refinement techniques. 4. Apply prompt engineering principles to generate desired outputs from AI for various everyday tasks.
Approx. Duration:	3-4 min
Outline	• 1. Introduction: Unlocking AI with Better Prompts • 2. The Foundation: Be Clear, Be Specific • 3. Adding Context & Role-Playing • 4. Constraints & Examples: Shaping the Output • 5. Iteration & Refinement: The Prompting Loop • 6. Practical Application: Your Turn to Prompt! • 7. Summary & Next Steps
Meta Tags	AI, Prompt Engineering, ChatGPT, Generative AI, Prompts, AI tools, Effective Prompting, AI literacy
Pre-requisite Tutorial	Basic understanding of using digital tools and common AI applications like ChatGPT or image generators.

Slide : The Art of the Prompt

Visual Cue	Narration
A friendly avatar or character presenting the title 'The Art of the Prompt - A Guide for Everyone' with a background featuring abstract AI elements and glowing lines.	Hello everyone! Welcome to this tutorial. Today, we will learn about 'The Art of the Prompt - A Guide for Everyone'. Let's dive in and unlock the power of AI through better prompts.

Slide : Learning Objectives

Visual Cue	Narration
------------	-----------

A checklist with checkmarks, symbolizing learning objectives achieved, set against a background of gears and lightbulbs representing understanding and application.	At the end of this tutorial, you will be able to: Define what a good prompt is and why it matters for AI tools. Identify key elements like clarity, context, and constraints. Construct better prompts through iterative refinement. And apply these principles to get desired outputs from AI for your tasks. These objectives will guide our learning journey today.
---	---

Slide : Prerequisites

Visual Cue	Narration
An illustration of a laptop screen displaying simple AI application icons, with question marks and gears, signifying foundational knowledge.	For this session, a basic understanding of digital tools will be helpful. Familiarity with AI applications like ChatGPT will also be useful. These prerequisites will help you follow along effectively.

Slide : System Requirements

Visual Cue	Narration
A clean visual showing a laptop and a smartphone side-by-side, both connected to a cloud icon, representing internet access and AI tools.	You will need a computer or smartphone with internet access. You will also need access to any generative AI tool. Popular examples include ChatGPT or Google Bard for practice. These are necessary to follow along and try out the concepts.

Slide : What is a Prompt?

Visual Cue	Narration
A person typing into a glowing AI interface, with abstract thought bubbles showing AI generating various outputs from the text input, emphasizing the concept of 'instruction to AI'.	Imagine you have a very smart assistant. They can do anything, but need clear instructions. This is what a 'prompt' is for AI. It is your instruction. A good prompt helps AI give you exactly what you want. Mastering prompts helps you unlock AI's full potential.

Slide : Be Clear, Be Specific

Visual Cue	Narration
------------	-----------

Two distinct text bubbles: one with vague, generic text like 'write about cats', leading to a blurred or generic image; the other with a clear, detailed prompt leading to a sharp, specific image of a cat comforting a professional. Visually contrast vague vs. specific.	The first rule is: Be clear and specific. Don't make the AI guess. State exactly what you want. For example, 'Write something about cats' is too vague. A better prompt specifies: 'Write a short, positive paragraph.' 'Focus on benefits of owning a cat for busy professionals.' 'Highlight stress relief after a long workday.' This prompt adds details like Who, What, When, and Why. It helps the AI give a much more targeted response. Being specific guides the AI to produce accurate and useful outputs.
--	--

Slide : Add Context and Role

Visual Cue	Narration
An AI chatbot interface with two inputs. One input shows a simple query, the other shows a detailed query including 'Act as a [role]' and 'Target audience: [group]'. Visuals for a chef, teacher, and marketer personas float around the detailed prompt.	Next, add context and role-play. Tell the AI its situation and who it should act as. Instead of 'Give me a recipe,' try: 'Act as a friendly, busy home cook.' 'Provide a simple, healthy recipe for a quick weeknight dinner.' 'It should take under 30 minutes for a family of four, with an encouraging tone.' This guides the AI to generate a very specific and useful recipe. Adding context ensures the AI understands your specific needs. Role-playing shapes the AI's persona and output style.

Slide : Set Boundaries and Give Examples

Visual Cue	Narration
A graphic showing different output formats (bullet points, paragraph, table) with labels for 'length' and 'style'. An example text bubble illustrates a specific writing style next to it, showing how AI can replicate it.	Finally, set boundaries and provide examples. Tell the AI the format, length, and style you want. For example, 'Write three bullet points about cat benefits for busy professionals.' Then, provide an example of the desired style. Like: 'Purr-Fect Companionship: Cats offer silent support, reducing loneliness.' This way, the AI will perfectly mimic the desired tone and conciseness. Setting boundaries helps control the AI's output structure. Examples guide the AI to match your preferred style precisely.

Slide : Key Takeaways

Visual Cue	Narration
------------	-----------

A stylized checklist graphic, with each key takeaway point visually represented by a small icon (e.g., magnifying glass for clarity, a speech bubble for role-play, a ruler for constraints, arrows for iteration).	To summarize, remember our Prompting Checklist: Be Clear and Specific. Avoid ambiguity. Add Context. Give the AI background information. Use Role-Play. Tell the AI who to be and its audience. Set Constraints. Define format, length, and style. And finally, Iterate and Refine your prompts in a conversation with the AI.

Slide : Assignment

Visual Cue	Narration
An imaginative illustration of a surprise sci-fi themed birthday party with board game elements, showcasing creativity and fun, with a thought bubble above an AI chatbot.	Here is a small assignment for you. Imagine planning a surprise party. Your friend loves sci-fi and board games. You want the AI to brainstorm ideas. First, write a basic prompt. Next, refine it by adding context. Tell the AI to act as a party planner. Finally, refine it further. Specify output format, like bullet points. Include themes, activities, and food. Also, set a fun and creative tone. Try it out with an AI tool and practice!
