

The Art of the Prompt - A Guide for Everyone

Module:	AI Interaction Basics
Episode:	The Art of the Prompt - A Guide for Everyone
Learning Objective:	At the end of this tutorial learner will be able to 1. Define what a prompt is and its importance in interacting with AI tools. 2. Formulate clear and specific prompts to get desired outputs from AI tools. 3. Incorporate context and role-playing into prompts for more relevant responses. 4. Specify desired output format and length in their prompts.
Approx. Duration:	3-4 min
Outline	• Introduction: What is a Prompt and Why Does it Matter? • Prerequisites • Core Concept 1: Be Clear and Specific • Core Concept 2: Give Context and Role • Core Concept 3: Specify Format and Length • Practical Activity: Planning a Local Trip • Summary and Next Steps
Meta Tags	AI, Chatbot, Prompting, Generative AI, How to use AI, Effective prompts, AI interaction, FOSSEE, EduPyramids
Pre-requisite Tutorial	Basic computer or smartphone use, ability to type, access to a web browser. Access to an AI chatbot (optional, but recommended for practice).

Slide : Welcome to 'The Art of the Prompt'

Visual Cue	Narration
A friendly, cartoon AI robot or chatbot character looking at a glowing speech bubble with a question mark and the title 'The Art of the Prompt'.	Welcome to this Spoken Tutorial. Today, we will learn about "The Art of the Prompt". This guide will help you talk to AI tools better. Let's start this exciting journey. [Pause] A good prompt helps you get useful answers from AI.

Slide : Learning Objectives

Visual Cue	Narration
A digital screen or chalkboard displaying a list of 3-4 learning objectives with checkmarks. An icon of a thinking person next to the list.	At the end of this tutorial, you will be able to... Define what a prompt is and its importance. Formulate clear and specific prompts for AI tools. [Pause] You will also learn to add context and role to prompts. Finally, you can specify desired output format and length. [Pause]

Slide : Prerequisites

Visual Cue	Narration
Icons representing a computer, a smartphone, a keyboard, and a web browser logo. An optional icon for an AI chatbot like a robot head or speech bubble.	To follow along with this tutorial, you need some basic skills. You should know how to use a computer or a smartphone. You also need to know how to type. [Pause] Access to an AI chatbot is helpful for practice. You can use tools like Google Bard or ChatGPT. This is not mandatory, but it is recommended.

Slide : System Requirements

Visual Cue	Narration
A checklist with green ticks next to icons for a computer, a Wi-Fi symbol, and a web browser icon. The overall feel should be minimal and clean.	For this tutorial, have your device ready. You need a computer or a smartphone. Make sure you have a stable internet connection. A web browser like Chrome or Firefox is also needed. [Pause] That's all for the basic setup.

Slide : Concept: What is a Prompt?

Visual Cue	Narration
A cheerful person talking to a friendly, cartoon AI robot. A speech bubble above the person shows text input, and a speech bubble above the robot shows text output.	Let's start by understanding what a prompt is. Imagine asking a smart friend for help. You would give them a question or instruction. [Pause] This question or instruction, given to an AI chatbot, is called a 'prompt'. AI chatbots understand your typed text. They then generate a reply or complete a task.

Slide : Why Prompting Matters

Visual Cue	Narration
A split image. On one side, a confused person at a shop with a vague thought bubble. On the other side, a satisfied person with a specific thought bubble, receiving the exact item.	Why is learning to prompt important? Let's use an example. If you ask a shopkeeper, "Give me something nice," you might get anything. [Pause] But if you ask for "a red cotton saree for a wedding", then you get exactly what you need. Prompting is similar. A good prompt gives useful and targeted results. This saves your time and helps you with many daily tasks. So, precise prompting leads to precise results.

Slide : Core Concept 1: Be Clear and Specific

Visual Cue	Narration
A funnel graphic. Broad terms like 'information' are at the wide top. Specific terms like 'main festivals in India' are at the narrow bottom, illustrating clarity.	Our first core concept for good prompts is: Be Clear and Specific. Asking an AI chatbot, "Tell me about India," is too broad. It will give lots of general information. [Pause] Instead, ask, "Tell me about the main festivals celebrated in India." This is specific. Use exact words and avoid vague terms. Add details that narrow down your topic. This helps the AI give you relevant information.

Slide : Core Concept 2: Give Context and Role

Visual Cue	Narration
An AI chatbot icon surrounded by thought bubbles containing different roles like 'teacher', 'student', 'expert'. Arrows show how the AI output changes based on the given context and role.	Our second core concept is: Give Context and Role. If you ask, "Explain photosynthesis," the AI might give a very scientific answer. [Pause] But if you say, "I am a 7th-grade student. Explain photosynthesis to me simply," the AI adjusts its language. Tell the AI what 'role' to play and who *you* are. Also, explain your goal. This helps the AI tailor its answer. Your goal is to help the AI understand you. This ensures the AI tailors its answer correctly.

Slide : Summary of Good Prompting

Visual Cue	Narration
A visually appealing infographic or list showing the three key tips for good prompting: 'Clear & Specific' (magnifying glass icon), 'Context & Role' (two people icon), 'Format & Length' (ruler icon).	Let's quickly summarise what we have learned. A prompt is your instruction to an AI chatbot. To get good answers, your prompts must be clear and specific. [Pause] Always give context and a role. This helps the AI understand your needs. Also, specify the format and length for easy-to-use output. Remember, practice makes you better! We covered three key concepts today. Mastering these will improve your AI interactions.

Slide : Assignment: Plan a Local Trip

Visual Cue	Narration
------------	-----------

A map with a 50km radius circled around a city center. Icons for two friends and a calendar for 'one day trip'. A large thought bubble contains a prompt being typed into an AI chatbot interface.	Here is a small assignment to practice your prompting skills. [Pause] Imagine you want to plan a fun, low-budget one-day trip for two friends. The trip should be to a place within 50 kilometres of your city. Your task is to write ONE effective prompt for an AI chatbot. [Pause] Use all the skills you learned. Include specific details, your role, and the desired output format. For example, a numbered list of places, activities, and food options. Try it out with an AI chatbot! Take your time to craft the best prompt. Good luck with your local trip planning!
