

The Art of the Prompt - A Guide for Everyone

Module:	AI and Digital Literacy
Episode:	The Art of the Prompt - A Guide for Everyone
Learning Objective:	At the end of this tutorial learner will be able to 1. Identify the essential components of a well-structured and effective AI prompt. 2. Apply techniques such as specificity, context, and role-playing to enhance prompt clarity and desired outcomes. 3. Construct multi-part prompts to generate targeted and useful responses from AI tools. 4. Evaluate and refine initial AI responses by iteratively modifying and improving prompts.
Approx. Duration:	3-4 min
Outline	• Introduction: Why Effective Prompting Matters? • Prerequisites: Getting Ready to Prompt • Core Concept 1: The Power of Clarity and Specificity • Core Concept 2: Adding Context and Constraints • Core Concept 3: Leveraging Roles and Examples • Practical Activity: Crafting a Multi-Part Prompt • Summary and Next Steps
Meta Tags	AI prompting, effective prompts, AI tools, ChatGPT, Bard, Copilot, prompt engineering, digital literacy
Pre-requisite Tutorial	Basic computer literacy and optional familiarity with an AI chat tool like ChatGPT.

An icon with a checklist or a lightbulb, representing learning and ideas.	At the end of this tutorial, you will be able to: - Identify the main parts of a good AI prompt. - Apply techniques like being specific, giving context, and role-playing. - Construct detailed prompts for useful AI responses. - Evaluate and improve AI answers by changing your prompts. Before we begin, let's look at what you need to get started with this tutorial.
---	---

Slide : Prerequisites

Visual Cue	Narration
A simple icon showing a computer mouse and keyboard.	To follow this tutorial, you should have basic computer skills. You should know how to use a web browser. Also, you need to be able to type and click buttons. It is helpful if you have tried an AI chat tool before, but it is not mandatory. Now, let's check the system requirements for this tutorial.

Slide : System Requirements

Visual Cue	Narration
Icons representing a laptop, a smartphone, Wi-Fi signal, and a web browser logo.	For this tutorial, you need a computer or smartphone. You also need an internet connection. Please use a web browser like Chrome or Firefox. Make sure you can access a free AI chat tool. For example, you can use ChatGPT or Google Bard. But why is learning effective prompting so important?

Slide : Why Effective Prompting Matters

Visual Cue	Narration
An illustration of a person interacting with an AI interface, showing a thought bubble with a clear question leading to a useful response, and a vague question leading to a confused response.	AI tools are becoming very common. They are powerful, but need clear instructions. Think of AI as a very smart assistant. It only understands exactly what you say. If your question is vague, the answer will also be vague.

Slide : Core Concept 1: Clarity and Specificity

Visual Cue	Narration
------------	-----------

Two contrasting thought bubbles: one with a messy, tangled question mark and a generic image; another with a clear, focused question mark and a detailed image.	Our first core concept is about being clear and specific. Avoid unclear language. Let's look at an example. If you ask 'Tell me about dogs,' the AI might give a very general answer. Instead, try 'Tell me three surprising facts about Golden Retrievers and their average lifespan.' This will get you a more specific and useful response. This shows the power of being precise. Consider a recipe request. Instead of a general one, try this: 'Give me a simple recipe for vegetarian pasta.' It should take less than 30 minutes to cook. Use ingredients commonly found in an Indian kitchen.
---	---

Slide : Core Concept 2: Context and Constraints

Visual Cue	Narration
An illustration showing a spotlight illuminating specific details (context) and a boundary box defining the shape and size of an object (constraints).	Let's move to our second concept: adding context and constraints. Context means giving background information. Instead of just 'Explain gravity,' you could say this: 'Explain gravity to a 10-year-old.' 'Use a simple analogy, like an apple falling from a tree.' This provides context about your target audience. Constraints guide the output format and length. For an email, don't just say 'Write an email.' Try this: 'Write a formal email to a client.' 'Apologise for a missed deadline, keeping it under 100 words.' 'Suggest a new delivery date of next Tuesday.'

Slide : Core Concept 3: Roles and Examples

Visual Cue	Narration
An illustration showing a small human figure wearing different hats (roles) and then a set of aligned input-output pairs (examples) guiding a larger AI brain.	Our third concept is about leveraging roles and examples. Role-playing means asking AI to act as someone. Instead of 'Tell me about Ancient Rome,' try this: 'Act as a Roman historian.' 'Describe a typical day in Ancient Rome, focusing on daily life and social structures.' This frames the AI's response in a particular style and perspective. Providing examples is also called Few-Shot Prompting. It shows the AI what you want. For a translation, don't just say 'Translate this to Hindi: Hello.' You can provide pairs, like 'English: Goodbye -> Hindi: Alvida.' Then ask: 'Now translate: English: How are you?' This guides the AI to match your desired translation style.

Slide : Summary: The ABCs of Prompting

Visual Cue	Narration
A graphic displaying three main points with icons: a magnifying glass for specificity, a thought bubble for context, and a stage mask for role-playing.	Let us quickly recap what we learned. Remember that Clarity and Specificity are key. These help you avoid vague responses. Provide Context and set Constraints for tailored outputs. Use Role-Playing and Examples for advanced control.

Slide : Assignment: Plan a Local Getaway

Visual Cue	Narration
An illustration of a family on a picnic in a scenic natural spot, with a speech bubble showing a complex, multi-part prompt.	Here is a small assignment for you. Your task is to use an AI chat tool to plan a local getaway. Imagine you need to plan a one-day trip for your family of four. You want a picnic spot near your city, with a low budget and natural beauty. First, start with a basic request. Then, add specificity. Next, add context about your budget and preferences. After that, add constraints like number of places and format. Finally, add role-playing, for example, 'Act as a local travel expert'. Submit your full prompt to the AI.
