

The Art Of The Prompt - A Guide For Everyone

Module:	Module 1: The Art of the Prompt - A Guide for Everyone
Episode:	1: Understanding Effective Prompting
Learning Objective:	At the end of this tutorial learner will be able to 1. Formulate clear and specific prompts to get desired outputs. 2. Utilize context, constraints, and roles to guide AI responses. 3. Iterate and refine prompts effectively based on initial results. 4. Apply prompt engineering techniques to various real-world tasks.
Approx. Duration:	3-4 min
Outline	• Introduction to Prompts • Being Specific with Details • Defining Roles and Audience • Setting Constraints and Format • Iterating and Adding Purpose • Hands-on Practice Assignment
Meta Tags	prompt engineering, AI prompts, chatbots, effective communication, search engines, AI tools, prompt writing, digital skills
Pre-requisite Tutorial	Basic computer literacy; Access to an AI chatbot (e.g., ChatGPT, Bard, Copilot) or a search engine.

Slide : The Art Of The Prompt - A Guide For Everyone

Visual Cue	Narration
Illustration of a person typing into an AI chat interface, with thought bubbles showing clearer results appearing. Text: The Art Of The Prompt.	Namaste, and welcome to this Spoken Tutorial. This module is titled The Art Of The Prompt - A Guide For Everyone. In this Episode 1, we will learn about Understanding Effective Prompting. We will cover fundamental concepts of effective prompting.

Slide : Learning Objectives

Visual Cue	Narration
Four distinct icons representing clarity, context, iteration, and application, arranged around a central thought bubble.	At the end of this tutorial, you will be able to: Formulate clear and specific prompts for desired outputs. Utilize context, constraints, and roles to guide AI responses. Iterate and refine prompts effectively based on initial results. And apply prompt engineering techniques to various real-world tasks.

Slide : Prerequisites

Visual Cue	Narration
Icons for computer, smartphone, internet browser, and a generic AI chatbot logo.	To follow this tutorial, you need some basic computer literacy. You need access to an AI chatbot like ChatGPT, Bard, or Copilot. Or simply a search engine. These tools will be essential for our practical exercises.

Slide : System Requirements

Visual Cue	Narration
Diagram showing a laptop, a smartphone, and a cloud icon connected by lines, representing internet access.	You can use any computer or a smartphone. Ensure you have an active internet connection. And a web browser like Chrome or Firefox to access the AI tools. These are the general system requirements for the tutorial.

Slide : What is a Prompt?

Visual Cue	Narration
An AI chatbot interface with a text box at the bottom and a thought bubble above it. Text 'Prompt' points to the text box. An arrow points from 'Prompt' to 'Output' which is a clear answer.	What exactly is a prompt? A prompt is simply your instruction or question. It is given to an AI tool or a search engine. Think of it like giving directions to someone. The clearer your directions, the better the output. You will receive more accurate results.

Slide : Be Specific: Adding Essential Details

Visual Cue	Narration
A magnifying glass focusing on a detailed map, with icons for 'who', 'what', 'where', 'when', 'why', 'how' around it. Below, a simple graphic contrasting a blurry generic image with a sharp, specific one.	First, let us learn to be specific. Adding essential details helps the AI understand your exact need. Always consider adding details like Who, What, Where, When, Why, and How. A weak prompt is 'Tell me about history.' This is too broad and will give a general answer. A better prompt: 'List 5 key Roman Empire achievements, focusing on engineering.' This prompt is specific about the topic, quantity, and focus. This leads to a much more useful output.

Slide : Define Roles and Audience: Setting Context

Visual Cue	Narration
Two distinct speech bubbles. One is complex and technical, with a scientist icon. The other is simple and uses analogies, with a cartoon teacher and child icons. A plant graphic is central.	Next, defining roles and audience sets the context for the AI's response. Tell the AI to act as a specific persona, like a teacher or expert. You can also specify who the audience is, such as a child or a professional. This shapes the tone, complexity, and style of the output. Instead of 'Explain photosynthesis,' try 'Explain photosynthesis to a 10-year-old.' Even better, 'Act as a friendly science teacher.' Explain photosynthesis to me, a 5th-grade student, with simple analogies.

Slide : Set Constraints and Format: Guiding Output Structure

Visual Cue	Narration
A checklist or a template graphic, with options for 'length', 'tone', 'style', 'format'. An arrow points to a perfectly structured document. Example of a numbered list.	It is important to set constraints. Also define the format for your desired output. You can specify the length, tone, and writing style. Also, the overall format of the AI's response. This ensures you get exactly the structure you need. A basic prompt would be, 'List benefits of reading.' An excellent prompt: 'List 5 benefits of daily reading for busy professionals.' Use a concise, professional tone. Present as a numbered list. Each point should be a single sentence.'

Slide : Iteration and Adding Purpose

Visual Cue	Narration
A circular arrow diagram representing iteration (prompt -> output -> refine -> new prompt). Another icon, a lightbulb with a 'Why?' question mark, next to it.	Remember, your first prompt is often just a starting point. This process is called iteration. Review the AI's output, then refine your prompt. Get closer to your ideal result. It is like having a conversation, not a single command. Explaining *why* you need the information helps the AI. It understands your underlying goal. Instead of 'Give me gift ideas,' try 'Give me gift ideas for my friend.' Who loves gardening, for under \$30, because I want something unique.'

Slide : Assignment: Practice Prompting

Visual Cue	Narration
A world map with travel icons, a notebook with an open AI chatbot interface next to it. Text: Your Turn!	Now, it is your turn to practice. Use your AI tool for this assignment. Your task is to plan a hypothetical weekend trip. First, start with a basic prompt like 'Plan a weekend trip.' Then, refine it. Add details such as the city, duration, your interests. Also, include budget and travel style. Next, add constraints. For instance: 'Present a daily itinerary with meals and a unique activity.' Finally, define a role for the AI. For example, 'Act as a local travel expert for the chosen city.' Experiment and see how your prompt refinements change the output.
