

The Art of the Prompt - A Guide for Everyone

Module:	Module 1: The Art of the Prompt - A Guide for Everyone
Episode:	Episode 1: Crafting Effective AI Prompts
Learning Objective:	At the end of this tutorial learner will be able to 1. Define the core components of an effective prompt. 2. Apply specificity, context, and constraints in prompts. 3. Refine AI outputs through prompt iteration. 4. Utilize advanced prompting techniques for complex tasks.
Approx. Duration:	3-4 min
Outline	• Introduction to Prompts • Being Specific in Prompts • Defining AI's Role and Setting Constraints • Iterating and Refining Prompts • Summary and Practical Assignment
Meta Tags	AI prompts, prompt engineering, ChatGPT, AI language models, effective prompting, AI communication, FOSSEE, EduPyramids
Pre-requisite Tutorial	Basic understanding of what AI language models (like ChatGPT, Bard, Claude) are. Access to an AI language model (e.g., a free online version). Basic computer literacy (typing, copy-pasting).

Slide : Welcome: The Art of the Prompt

Visual Cue	Narration
A person interacting with a glowing chatbot interface, showing a thought bubble with a question mark and then a clear, focused answer, illustrating effective communication with AI.	Namaste and welcome to The Art of the Prompt - A Guide for Everyone. This tutorial is Module 1, Episode 1. It focuses on crafting effective AI prompts. Good prompts help AI tools give you useful results. Here, you will learn to write clear instructions for AI. This will help you get better and more relevant outputs for your tasks.

Slide : Learning Objectives

Visual Cue	Narration
------------	-----------

A visual representation of four clear, distinct goals or targets with arrows pointing towards them, symbolizing learning objectives. Each goal can have a small icon representing its concept (e.g., a gear for 'components', a magnifying glass for 'specificity', a loop for 'refine', a brain for 'advanced techniques').	At the end of this tutorial, you will be able to: First, define the core components of an effective prompt. Second, apply specificity, context, and constraints in your prompts. Third, refine AI outputs by iterating on your prompts. Finally, utilize advanced prompting techniques for complex tasks. Mastering these objectives will enhance your AI interactions.
---	---

Slide : Prerequisites

Visual Cue	Narration
A user sitting at a computer, with an open web browser showing a generic AI chatbot interface. Icons representing basic computer actions like a keyboard for typing and a clipboard for copy-pasting are visible. A small thought bubble above the user's head indicates prior knowledge.	To follow this tutorial, you need a basic understanding of AI language models. This includes tools like ChatGPT, Bard, or Claude. You should also have access to one of these platforms. Additionally, basic computer literacy, like typing and copy-pasting, is helpful. This will help you practice alongside the examples.

Slide : What is a Prompt?

Visual Cue	Narration
A visual progression from a very vague, cloudy thought bubble representing 'Write something' to a highly detailed, structured thought bubble with text and icons representing 'short story', '200 words', 'brave mouse', 'lost bird', 'happy ending'. An AI robot hand is 'listening' to these thought bubbles.	What exactly is a prompt? It is simply your instruction to the AI. It tells the AI what you want to achieve. Let's look at an example. A weak prompt is 'Write something'. This gives a generic, unhelpful output. A good prompt is 'Write a short story'. This is better, but still broad. A better prompt is 'Write a short story about a brave mouse'. This prompt is now focused on a specific subject. An excellent prompt adds all necessary details. For example, consider this prompt. 'Write a short story, exactly 200 words. It's about a brave mouse who saves a lost bird. The story should have a happy ending.' This leads to a focused story that meets all criteria. Clear prompts lead to specific results.

Slide : Be Specific: Guiding AI's Focus

Visual Cue	Narration
A magnifying glass focusing sharply on a specific, complex diagram of quantum physics. On one side, a blurred, general image of physics, and on the other, a simplified diagram with analogies like 'wave' and 'particle' represented by relatable icons. A high school student figure is observing.	Vague prompts always lead to vague answers. You must guide the AI's focus effectively. Tell the AI exactly what information you need. Include details about your topic, audience, and purpose. Consider this basic prompt: 'Explain Quantum Physics'. The AI will likely give a very complex, long explanation. Now, look at this advanced prompt. It asks to 'Explain Quantum Physics to a high school student in 3 short paragraphs'. It specifies to 'Focus on superposition and entanglement, using simple analogies'. This prompt is concise and targeted. It uses accessible language. It clearly defines the audience and specific concepts.

Slide : Define Role & Set Constraints

Visual Cue	Narration
A split image. On one side, a theatrical mask and various tools (wrench, hammer) representing 'Define Role'. On the other, a ruler and a checklist representing 'Set Constraints'. Both sides are connected to a visual of an AI generating tailored content.	You can tell the AI to act as a specific persona. This is called 'Defining the Role'. It changes the AI's tone and overall style. For example, 'Explain how to fix a leaky faucet' gives standard instructions. However, a role-defined prompt gives more engaging advice. It asks for fixing a leaky faucet, including mistakes, tools, and humor. This results in engaging, practical advice. Next, 'Set Constraints' to control the output. Specify length, format, and what to include or exclude. A basic request like 'List benefits of exercise' gives a simple list. However, a constrained prompt provides structured output. It asks for '5 benefits of exercise', each with a 1-sentence explanation and example. It also specifies to 'Format as an HTML unordered list'. This ensures precise content and structure. Applying these techniques enhances AI's utility.

Slide : Iterate and Refine

Visual Cue	Narration
------------	-----------

A visual representation of an iterative process: a user typing a prompt, an AI generating a response, the user then typing a 'refinement' prompt, and the AI generating an improved response. Use circular arrows to show the feedback loop of improvement. An eraser icon symbolizes 'refinement'.	Remember, your first prompt might not be perfect. It is perfectly okay to refine your prompts. Think of it as an ongoing conversation with the AI. Let's trace an example. Prompt 1: 'Write about dogs'. This gives very general text. We refine it: 'Too general. Write about Golden Retrievers' friendly nature'. Now the AI provides text specifically about their temperament. We refine it again for more detail. The prompt now asks for 'a short paragraph about Golden Retrievers' friendly nature'. It specifically mentions 'suitability as family pets and patience with children'. It also specifies to 'Use an encouraging tone'. This iterative process leads to a focused paragraph. It includes all desired details and tone. Iteration is crucial for optimal AI results.

Slide : Summary

Visual Cue	Narration
A clean, infographic-style slide with four distinct icons representing the key concepts: a lightbulb for 'clear instructions', a theatrical mask for 'role/constraints', a looping arrow for 'iterate/refine', and two speech bubbles for 'conversation'.	Let us summarize what we have learned. First, clear and specific instructions are key for effective prompts. Avoid any vagueness in your requests. Second, define the AI's role clearly. Set specific constraints on the output format and length. Third, always iterate and refine your prompts. Do this based on the AI's initial responses. Remember, good prompting is an ongoing conversation with the AI. This approach consistently leads to better results.

Slide : Assignment: Recipe Creation

Visual Cue	Narration
------------	-----------

A split screen showing a simple, generic recipe output on one side and a detailed, well-formatted recipe with bulleted ingredients and numbered steps on the other. A busy person in a kitchen is happy with the improved recipe. Icons for rice, beans, frozen vegetables are present.	Now it is your turn! Use an AI language model for this assignment: Recipe Creation. Your goal is to get a healthy, budget-friendly dinner recipe. It should take less than 20 minutes to prepare. It must use common pantry ingredients. First, start with a basic prompt like 'Give me a dinner recipe'. Then, refine it: 'Make it healthy and budget-friendly'. Next, add more specific details. The prompt states: '<20 minutes prep, use rice, canned beans, and frozen vegetables'. Finally, add a persona and format. Ask the AI to 'Act as a busy home cook'. Instruct it to 'List ingredients as bullet points, steps as numbered instructions'. Compare your initial and final AI outputs to see the difference.
