

Mastering AI Prompting: A Skill for Everyone

Module:	Module 1: Introduction to AI Prompting
Episode:	Episode 1: The Art of Prompting for Non-Coders
Learning Objective:	At the end of this tutorial learner will be able to 1. Construct clear, concise, and complete prompts using the 3 C's. 2. Utilize personas and examples to guide AI models to desired outputs. 3. Apply advanced techniques like Chain-of-Thought and structured output. 4. Refine AI responses through iterative prompting and conversational adjustments.
Approx. Duration:	3-4 min
Outline	• Introduction to Prompting • The Anatomy of a Good Prompt (The 3 C's) • Adding a Persona to Your Prompt • Guiding AI with Examples (Zero, One, and Few-Shot Prompting) • Thinking Deeper and Structuring Output • Iterative Prompting: The Art of Conversation • Practical Lab: Your Turn!
Meta Tags	AI prompting, ChatGPT, Gemini, DALL-E, AI tools, non-coder skills, prompt engineering, AI communication, effective prompting
Pre-requisite Tutorial	You should have basic computer literacy. Access to an AI chatbot like Google Gemini or ChatGPT, or an image generator like DALL-E 3 is helpful. A willingness to experiment and learn is also required.

Slide : Welcome! Introduction to AI Prompting

Visual Cue	Narration
A friendly AI robot with an 'intern' badge, sitting at a desk, looking ready to take instructions from a human. The robot has a futuristic yet approachable design. Simple, clean office background.	Hello and welcome to this tutorial on AI Prompting! If you are not a coder, this is your most important skill for using AI effectively. Imagine an AI model as an incredibly smart, fast, and knowledgeable intern. It can do amazing things, but it needs very specific instructions.

Slide : Learning Objectives

Visual Cue	Narration
------------	-----------

A list of bullet points titled 'Learning Objectives' with each point represented by a simple icon, like a light bulb for 'construct', a person for 'utilize', a gear for 'apply', and speech bubbles for 'refine'. Bright, encouraging colours.	At the end of this tutorial, you will be able to: First, construct clear, concise, and complete prompts using the three C's. Next, you will utilize personas and examples to guide AI models. Then, you will apply advanced techniques like Chain-of-Thought and structured output. Finally, you will refine AI responses through iterative prompting.

Slide : Prerequisites for This Tutorial

Visual Cue	Narration
Icons representing computer literacy, a chat bubble for AI chatbot, and a light bulb for willingness to learn, arranged neatly on a digital screen background.	Before we start, let's look at what you need for this tutorial. You should have basic computer literacy. Access to an AI chatbot like Google Gemini, ChatGPT, or Claude is helpful. If you have access, an image generator like DALL-E 3 can also be used.

Slide : System Requirements

Visual Cue	Narration
A minimalist illustration showing a computer screen with a browser window, an internet Wi-Fi symbol, and a small speech bubble icon to represent an AI chatbot. Clean, digital art style.	To follow along, you will need a stable internet connection. Any modern web browser like Google Chrome or Mozilla Firefox will work. It is also recommended to have an account with an AI chatbot. Many popular AI tools offer free versions that are sufficient for this tutorial.

Slide : What is AI Prompting?

Visual Cue	Narration
An illustration of a human user typing on a keyboard, with a glowing line connecting to a stylized AI brain or robot icon. A thought bubble above the AI shows ideas forming, representing output. Digital art, focus on interaction.	Let's understand what AI prompting truly means. Think of an AI as a very smart assistant or an intern. It can do many tasks quickly and efficiently. However, just like an intern, it needs clear and specific instructions. Prompting is simply about giving these instructions effectively.

Slide : The 3 C's: Clarity and Context

Visual Cue	Narration
An infographic showing two thought bubbles side-by-side. One has a question mark (weak prompt), the other has clear bullet points (clear prompt). Below it, another visual shows a person providing background information to an AI brain icon. Simple, clean design.	A good prompt has three key ingredients: Clarity, Context, and Constraints. First, Clarity: Be specific! The AI does not know what you are thinking. A weak prompt like 'Write about electric cars' is too vague. A clear prompt is: 'Write a blog post on the top 3 benefits of electric cars.' Add that this is for someone living in a city. Second, Context: Give it background. Tell the AI why you are asking and for whom. Adding context makes the previous good prompt even better.

Slide : The 3 C's: Constraints and Persona

Visual Cue	Narration
An infographic showing a measuring tape or ruler around text (constraints). Next to it, an icon of a person with various hats representing different roles or personas, interacting with a chat interface. Simple, illustrative style.	Third, Constraints: These are boundaries that shape the output. Tell the AI the length, format, and style you need. Adding constraints makes our prompt excellent. For example: 'Write a short blog post, under 400 words.' 'Make it for a sustainable living blog. Explain top 3 benefits of electric cars.' 'Use a friendly tone and end with a question for city dwellers.' A powerful trick is to add a Persona. Tell the AI who to act as.

Slide : Advanced Prompting: CoT & Structured Output

Visual Cue	Narration
On one side, a simple flowchart showing 'Step 1 -> Step 2 -> Step 3' with a thought bubble. On the other side, icons representing various data formats like a table, JSON {curly braces}, and a bulleted list. Digital, clean aesthetics.	Let's explore some advanced prompting techniques. Chain-of-Thought, or CoT, asks the AI to 'think step-by-step'. This is very useful for problems with logic, math, or reasoning. It reduces errors. Consider this example: 'I have 5 boxes of 12 apples.' 'I eat 3 and give away one full box. How many apples are left? Think step-by-step.' Another technique is Structured Output. Tell the AI the exact format you need.

Slide : Summary of Key Concepts

Visual Cue	Narration
------------	-----------

A visually appealing infographic with five distinct sections, each representing a key summary point with a relevant icon (e.g., a magnifying glass for 3 C's, a mask for persona, a gear for advanced techniques, speech bubbles for iterative prompting). Bright and informative.	Let's quickly recap what we have learned today. Prompting is the key skill for getting great results from AI tools. Always remember the 3 C's: Clarity, Context, and Constraints. These make your prompts effective. You can enhance your prompts by adding a Persona and providing examples. Advanced techniques like Chain-of-Thought help AI solve complex problems. Structuring the output ensures you get the information in a usable format.
---	---

Slide : Assignment: Practice Your Prompting Skills

Visual Cue	Narration
A split screen. On one side, a stylized illustration of a person doing simple home exercises. On the other side, an AI chatbot interface displaying a prompt and an empty table structure for a workout plan. Dynamic and practical.	Now it is your turn to practice. This assignment helps apply what you learned. Open an AI chatbot tool like Google Gemini or ChatGPT. Your task is to act as a fitness coach. Create a simple 3-day home workout plan for a beginner. It should need no equipment, focusing on full-body exercises. Present the output in a table format. Use columns for 'Day', 'Exercise', and 'Duration'.

Slide : Thank You & Acknowledgements

Visual Cue	Narration
The 'Spoken Tutorial' logo on one side and 'FOSSEE, IIT Bombay' and 'EduPyramids' logos on the other. A simple thank you message in the center. Professional and clean design.	Congratulations! You now have the basic skills to get good results from any AI tool. Remember, the more you practice, the better you will get. Explore different AI tools and challenge yourself with new prompts. For more tutorials, please visit the Spoken Tutorial website. It is available at spoken-tutorial.org. This content is brought to you by the FOSSEE project, IIT Bombay, and EduPyramids.
