

Spoken Tutorial – 3 Cs of Prompting: Write Effective AI Prompts

Title: 3 Cs of Prompting: Write Effective AI Prompts

Module	AI Prompt Engineering
Episode	Episode 1: The 3 Cs of Prompting
Learning Objective	At the end of this tutorial learner will be able to 1. By the end of this tutorial, you will be able to write effective prompts. 2. Use AI chatbots effectively. 3. Apply the 3 Cs approach: Clarity , Conciseness , and Context .
Approx. Duration	10 minutes
Outline	• Introduction to the 3 Cs of Prompting • Understanding Clarity in Prompts • Understanding Conciseness in Prompts • Understanding Context in Prompts • Applying the 3 Cs Together • Summary and Assignment
Meta Tags	AI, Prompt Engineering, ChatGPT, LLM, Artificial Intelligence, Prompt Writing, Clarity, Conciseness, Context
Pre-requisite Tutorial	Learners should have basic computer and internet usage skills. Familiarity with what AI chatbots are will be helpful.

Script

Visual Cue	Narration
Welcome screen for '3 Cs of Prompting' tutorial, featuring stylized icons representing Clarity, Conciseness, and Context, with a friendly AI robot or chatbot character.	Welcome to this Spoken Tutorial on the 3 Cs of Prompting . Here, you will learn to write good questions for AI chatbots . This helps you get better answers from AI .
A visual representation of learning objectives, with a list icon and a lightbulb for 'understanding AI prompts better', featuring the text 'Clarity', 'Conciseness', 'Context'.	After this tutorial, you will be able to write good questions for AI chatbots . You will use the 3 Cs method: Clarity , Conciseness , and Context .
Computer screen showing a web browser with a search bar and a generic chatbot interface, next to a Wi-Fi symbol, indicating internet connection and chatbot access.	To follow this tutorial, you need a web browser and internet. You can use any basic AI chatbot . For example, use ChatGPT , Google Bard , or Microsoft Copilot to practice.
A person sitting at a desk using a laptop, with a thought bubble above showing a simplified icon for an AI chatbot, representing basic computer and internet skills and chatbot familiarity.	Before you start, you should know how to use a computer and the internet. It helps if you know what AI chatbots are. Also, know how to open them.

A confused person looking at a computer screen displaying a nonsensical or irrelevant answer from an AI chatbot, symbolizing miscommunication with AI.	Have you ever got a strange answer from an AI chatbot ? This happens when the AI does not understand your question well. The way we ask questions to AI is called ' prompting '.
Three large, distinct letter 'C's (Clarity, Conciseness, Context) arranged around a central brain or lightbulb icon, representing core principles of AI prompting.	To get better answers from AI , we use three important rules. These are called the 3 Cs of Prompting . They are Clarity , Conciseness , and Context . Let us look at each one with examples.
A magnifying glass focusing on a crisp, clear word, symbolizing specificity and clarity in communication.	Clarity means you must be very clear in your question. Do not use unclear words. The AI must know exactly what you want. Let us see an example.
A blurred or hazy image of a dog, next to a generic text box saying 'Tell me about dogs', illustrating a lack of clarity in a prompt.	Let us try a bad question. Open your AI chatbot . Type 'Tell me about dogs.' Press Enter. The AI gives a very general answer. This is because our question was not clear enough.
A clear, focused image of a Golden Retriever engaging in specific activities (eating, sleeping, playing), with a detailed text box showing the specific prompt, demonstrating clarity.	Now, let us make it clear. Type the following prompt. Ask to explain the daily routine of a Golden Retriever dog. Also, include its food and sleep habits. Press Enter. You will see a focused and exact answer. This is how clarity helps.
A symbol of a pair of scissors cutting a long, winding string into a short, straight piece, representing brevity and directness.	Conciseness means to be short and direct. Use less words to say what you mean. This helps the AI understand quickly. Let us see an example.
A very long, scrolling text box filled with dense, wordy text, contrasting with a small, efficient AI chatbot icon, demonstrating an overly wordy prompt.	Let us try a long question. Type the following prompt. First, ask to generate an email for your team. Next, mention the project deadline is next Friday. Then, remind them to submit initial drafts by Wednesday. See the AI's answer.
A short, focused text box with the concise prompt, next to an email icon, showing an efficient and direct communication with the AI.	Now, let us be short. Type the following prompt. Ask to draft an email to your team. Mention the project deadline is next Friday. Remind them to submit initial drafts by Wednesday. See, the AI gives a similar email with a shorter question. Being short saves time.
A thought bubble or speech bubble containing various related images and keywords, all leading to a central question mark, illustrating the provision of background information.	Context means to give the AI background details. You can tell the AI its role, or give special rules. This helps the AI give a better answer. Let us see an example.

A generic, archetypal hero figure in a bland, unspecific setting, with a simple text box saying 'Write a short story about a hero', depicting a lack of context.	Let us try a question without context . Type: 'Write a short story about a hero.' Press Enter. The AI gives a common story. It does not know what hero or place you like.
A detailed fantasy scene with a reluctant hero, a magical forest, and a dark sorcerer, alongside a text box showing the prompt with specific contextual roles and elements.	Now, let us add context . Type the following prompt. First, set the AI's role as a fantasy writer. Ask for a 150-word story about a reluctant hero. State that he must save a magical forest. Specify from a dark sorcerer. Press Enter. See, the story is now more specific and creative. This is because we gave context .
A visual representation combining the three C's (Clarity, Conciseness, Context) with arrows pointing to a fully formed, effective prompt example, showcasing a well-crafted vegetarian pasta recipe.	The best questions use all 3 Cs: Clarity, Conciseness, and Context . For example, you can ask for a recipe. Start by setting the AI's role as a professional chef. Ask for a concise recipe for a simple vegetarian pasta dish. Specify that it should be prepared in under 30 minutes. Also, mention using common pantry ingredients. Finally, ask to focus on flavor and ease of preparation. This question is clear, short, and gives background to the AI .
A summary slide with bullet points or icons representing Clarity (magnifying glass), Conciseness (scissors), and Context (thought bubble), with a checkmark indicating understanding.	In this tutorial, we learned about the 3 Cs of Prompting . Clarity means being specific. Conciseness means being short. Context means giving background details. Using these helps you get better answers from AI .
A notebook and pen with two distinct task icons (e.g., a suitcase for travel, a social media icon for a post), showing 'Good Prompt' and 'Bad Prompt' comparisons.	For your homework, choose two different tasks. For example, ask for travel help or write a social media post. For each task, write two questions. Write one bad question. Then, write one good question. Make sure to use the 3 Cs for the good one. Test them on an AI chatbot and compare the results.
The logos of EduPyramids, SINE, and IIT Bombay displayed prominently, with a 'Thank You' message and a virtual handshake or celebratory graphic.	This Spoken Tutorial is from EduPyramids Educational Services Private Limited. It is also from SINE and IIT Bombay . Thank you for joining!
