

Your Single Most Important Skill For Using AI: Prompting

Module:	Prompt Engineering Basics
Episode:	2.1: The Art of Prompting AI
Learning Objective:	At the end of this tutorial learner will be able to 1. Identify key elements of a good AI prompt. 2. Apply techniques like persona and examples in prompts. 3. Refine AI outputs through conversational prompting.
Approx. Duration:	3-4 min
Outline	• Introduction to AI Prompting • The 3 C's of a Good Prompt: Clarity, Context, Constraints • Bonus: Using a Persona and Examples • Advanced Technique: Iterative Prompting • Practical Lab and Next Steps
Meta Tags	AI prompting, prompt engineering, ChatGPT, Google Gemini, AI skills, non-coder AI, effective prompts, artificial intelligence
Pre-requisite Tutorial	Basic understanding of AI models. Access to an AI chatbot (e.g., ChatGPT, Google Gemini).

Slide : Welcome to AI Prompting!

Visual Cue	Narration
Modern, minimalist title slide with the text 'Your Single Most Important Skill For Using AI: Prompting' and 'EduPyramids' logo. Clean, professional design.	Namaste and welcome to this Spoken Tutorial! Today, we learn about a crucial AI skill. It's called Prompting. Prompting helps both coders and non-coders get the most out of AI.

Slide : Learning Objectives

Visual Cue	Narration
------------	-----------

Slide with three clear bullet points, each with an icon representing a learning objective. Text: 'Identify key elements of a good AI prompt', 'Apply techniques like persona and examples in prompts', 'Refine AI outputs through conversational prompting'.	At the end of this tutorial, you will be able to: First, identify the main parts that make a good AI prompt. Second, apply advanced techniques, like giving the AI a role or examples. Third, you will improve AI answers through conversational prompting.
--	--

Slide : Prerequisites

Visual Cue	Narration
Slide showing a person sitting in front of a computer, with an AI chatbot interface visible. Text: 'Basic understanding of AI models', 'Access to an AI chatbot'.	For this tutorial, a basic idea of AI models like ChatGPT is helpful. Having access to an AI chatbot for practice will also be beneficial. Don't worry if you are completely new, we will guide you step-by-step.

Slide : System Requirements

Visual Cue	Narration
Simple graphic showing a laptop or smartphone with a Wi-Fi symbol, illustrating connectivity and access to an AI chatbot icon.	This tutorial requires a computer or smartphone with internet access. You should also have access to any AI chatbot. This could be ChatGPT, Google Gemini, or Claude.

Slide : AI: Your Smart Intern

Visual Cue	Narration
A friendly, intelligent-looking cartoon intern character sitting at a desk, looking eagerly at a user who is giving instructions. A thought bubble above the intern has a question mark, implying they need clear directions.	Imagine you have a very smart, fast, and knowledgeable intern. This intern can do amazing things for you. But like any intern, it needs clear instructions to do the job well. Prompting is simply giving clear instructions to AI models.

Slide : The 3 C's of Prompting: Clarity

Visual Cue	Narration
Visual contrast between a blurry, vague image and a sharp, clear image. Text overlay: 'Clarity: Be Specific!'. An example of a weak prompt leading to a generic output and a clear prompt leading to a specific output.	A weak prompt will give you a weak answer. Your prompts need three key ingredients: Clarity, Context, and Constraints. Let's start with Clarity: Always be specific. The AI doesn't know what you are thinking. A weak prompt like 'Write about electric cars' will give a general answer. A clear prompt, like the example on screen, gives a much better result.

Slide : Context and Constraints

Visual Cue	Narration
Two distinct sections on a slide: one showing a background scene with a blog logo (context) and another showing a ruler or boundary lines with a word count and tone meter (constraints). Text: 'Context: Give Background!' and 'Constraints: Set Rules!'.	Next, let's talk about Context. Context tells the AI why you are asking and who the audience is. Adding details like 'for a lifestyle blog' helps the AI get the right tone. Finally, Constraints set the rules for the output. Tell the AI the length, format, or style you need.

Slide : Advanced Techniques: Persona and Examples

Visual Cue	Narration
An AI robot wearing different hats (e.g., travel agent hat, summarizer icon) to represent a 'persona', alongside a small example text snippet showing a desired output format (one-shot example).	Now, let's look at some advanced techniques. First, you can tell the AI to 'Act as' a specific persona. Using 'Act as an expert travel agent' sets the AI's perspective. This is very powerful. Another technique is to give the AI examples to follow.

Slide : Advanced Technique: Iterative Prompting

Visual Cue	Narration
------------	-----------

A visual representation of a conversation flow with an AI chatbot. Two speech bubbles, one with an initial broad request, followed by a second speech bubble with a specific refinement. Arrows indicate the refinement process.	Sometimes, the first answer from AI isn't perfect. That's where iterative, or conversational, prompting comes in. It's like a dialogue: you give an initial prompt. Then, you follow up with more instructions to refine its response. For example, you ask for breakfast ideas. Then, you can say, 'Make them vegetarian and high-protein.' The AI will then adjust its previous answer.

Slide : Summary: Key Takeaways

Visual Cue	Narration
A clean, modern summary slide with bullet points summarizing the key concepts, possibly with checkmarks or lightbulb icons. Text: 'Prompting is giving clear instructions to AI.', 'Use the 3 C's: Clarity, Context, Constraints.', 'Advanced tips include providing a Persona and Examples.', 'Iterative prompting helps refine results.'	Let's quickly recap what we have learned today. Prompting is about giving clear and specific instructions to AI. Always remember the 3 C's: Clarity, Context, and Constraints. Use advanced techniques like giving the AI a persona or examples. Lastly, refine your AI's responses by having a conversation with it.

Slide : Assignment: Practice Your Skills

Visual Cue	Narration
A person actively using an AI chatbot on a laptop, with a prompt box visible. The initial prompt text is visible: 'Create a 3-day home workout plan as a fitness coach, in a table format.'. A second speech bubble indicates a follow-up refinement prompt: 'Make the plan suitable for someone over 50 years old.'	Now it's your turn to practice! Open any AI chatbot like ChatGPT or Google Gemini. Try the prompt shown on screen. It combines a persona, the 3 C's, and structured output. Enter the detailed prompt you see on screen into your chatbot. Once you get the workout plan, try refining it. Ask the AI to 'Make the plan suitable for someone over 50 years old.'

Slide : Acknowledgements
