

Welcome to Prompt Engineering!

Module:	Welcome! Not a coder? This is your key skill for using AI effectively. Think of an AI model like an incredibly smart, fast intern. It can do amazing things, but it needs specific instructions. Prompting is the art of giving AI instructions for quality results.
Episode:	Module 2.1: Mastering AI Instructions - The Art of Prompting
Learning Objective:	At the end of this tutorial learner will be able to 1. Identify three key elements of an effective AI prompt. 2. Create clear and specific prompts using Clarity, Context, and Constraints. 3. Refine AI outputs through iterative prompting for better results.
Approx. Duration:	3-4 min
Outline	• Introduction to Prompt Engineering • The 3 C's: Clarity, Context, and Constraints • Using a Persona in Prompts • Iterative Prompting: The Conversational Approach • Practical Application and Summary
Meta Tags	AI, Prompt Engineering, ChatGPT, Google Gemini, AI skills, non-coder AI, AI instructions, Clarity Context Constraints
Pre-requisite Tutorial	Basic understanding of what AI tools like ChatGPT or Google Gemini are; Access to an AI chatbot or image generation tool to practice.

Slide : Welcome to Prompt Engineering!

Visual Cue	Narration
A friendly, futuristic robot helping a person type a prompt into a glowing AI interface on a screen. The screen shows text like 'AI Prompt' and 'Get Results'.	Namaste and welcome to this Spoken Tutorial on Prompt Engineering! If you are not a coder, this is your single most important skill. It is vital for effectively using Artificial Intelligence. Think of an AI model like an incredibly smart and fast intern. It can do amazing things, but it needs very specific instructions. Prompting is the art and science of giving these instructions. This helps you get the exact results you want from the AI.

A brightly colored graphic displaying three bullet points with checkmarks, symbolizing clear learning objectives. Each point is distinct.	At the end of this tutorial, you will be able to: First, identify the three key elements of an effective AI prompt. Second, create clear prompts with Clarity, Context, and Constraints. Third, refine AI outputs using iterative prompting for better results.

Slide : Prerequisites for This Tutorial

Visual Cue	Narration
Icons representing a computer, a smartphone, and a brain with a lightbulb. Below, icons for popular AI chatbots like ChatGPT and Google Gemini.	To get the most out of this tutorial, you should have: A basic understanding of what AI tools like ChatGPT or Google Gemini are. And access to an AI chatbot or an image generation tool to practice.

Slide : System Requirements

Visual Cue	Narration
A generic computer screen showing a web browser with a simple AI chatbot interface. A Wi-Fi signal icon is prominent.	For system requirements, you will need: Any computer or smartphone that has internet access. And a modern web browser, such as Chrome, Firefox, or Edge.

Slide : What is Prompt Engineering?

Visual Cue	Narration
An animated, friendly intern character, possibly a cartoon person, sitting at a desk with a laptop, looking attentive and ready to work. A lightbulb appears above their head.	So, what exactly is Prompt Engineering? Imagine you have a very smart intern who can do many things. This intern needs clear and precise instructions to do the job perfectly. Prompt engineering teaches you to give precise instructions to AI models. It is about getting the AI to understand your request exactly. This ensures it gives you exactly what you need.

Slide : The 3 C's: Clarity and Context

Visual Cue	Narration
------------	-----------

A split image: Left side shows a magnifying glass on a vague, blurry text. Right side shows a clear, focused document with specific keywords. Below that, a thought bubble with a city skyline and a person reading a blog.	A weak prompt gives a weak answer; a great prompt gives a great answer. Best prompts use three key ingredients: Clarity, Context, and Constraints. First, let us talk about Clarity. This means being specific and avoiding vague words. The AI doesn't know what you are thinking, so you need to be explicit. For example, a weak prompt is, 'Write about electric cars.' A clearer prompt would be: 'Write a blog post on the top 3 benefits of electric cars for city dwellers.' Now, let us move to the second C: Context. Context means providing background information to the AI. Tell it the 'why', 'for whom', or the overall situation. This helps the AI understand the purpose and tailor its response appropriately. Building on our clear prompt, we can add context. For example, we might specify: 'Write a blog post on the top 3 benefits of electric cars for city dwellers, for an environmental blog aiming to convince young urban professionals to switch to EVs.' This added context helps the AI understand the audience and the desired persuasive tone.

Slide : The 3 C's: Constraints and Persona

Visual Cue	Narration
A split image: Left side shows a ruler and a pen on a notebook, illustrating setting limits. Right side shows a theatrical mask or an icon of a person wearing different hats (e.g., chef, doctor, teacher) to represent persona.	Third, Constraints: Set the rules. These are boundaries that shape the AI's output. Tell the AI the length, format, and style you need. Building on our electric car example, we can add specific constraints. For instance, 'Write under 400 words, use a friendly tone.' Also, 'End the output with a question.' Bonus Tip: Provide a Persona.

Slide : Iterative Prompting: Talk to AI

Visual Cue	Narration
------------	-----------

Two stylized speech bubbles showing a conversation flow. The first bubble has a question, the second an answer, then a refined question, and a refined answer. Use simple icons like a coffee cup.	Once you have the basics, you can refine your prompts. Iterative prompting means your first prompt is rarely your last. The real skill is refining your prompts based on the AI's output. Treat your interaction with AI like a conversation. For example, you might ask, 'Write a slogan for my new coffee shop.' The AI might reply, 'Brewing Happiness, One Cup at a Time.' You can then refine this by saying, 'That's good, but make it shorter.' Also, 'Can you make it more modern?' The AI might then give you, 'Urban Brews. Your Daily Grind.'

Slide : Key Takeaways

Visual Cue	Narration
A simple infographic with three distinct icons: a magnifying glass for Clarity, a thought bubble for Context, a ruler for Constraints, a theatrical mask for Persona, and two speech bubbles for Iterative Prompting.	Let us summarize what we have learned today. Remember to always use Clarity, Context, and Constraints. Apply these when writing your prompts. Don't forget to provide a Persona; it helps guide the AI's role. And finally, use iterative prompting. Treat it like a conversation to refine your answers.

Slide : Your Assignment

Visual Cue	Narration
A cartoon person doing simple exercises at home, like squats or push-ups. Next to them, a glowing AI chatbot interface showing the example prompt being typed in.	Now it is your turn to practice. Open up an AI tool like Google Gemini, ChatGPT, or Claude. Your assignment is to create a simple 3-day workout plan. You need to combine a Persona, the 3 C's, and a structured output. Here is the prompt you can try:
