

Effective Prompting: Your Key AI Skill

Module:	Welcome! If you're not a coder, this is your single most important skill for using AI.
Episode:	2: Effective Prompting: Your AI Communication Skill
Learning Objective:	At the end of this tutorial learner will be able to 1. Identify the three essential components for clear AI prompts. 2. Apply techniques like persona and structured output for precise AI responses. 3. Formulate effective prompts for various AI tasks.
Approx. Duration:	3-4 min
Outline	• Introduction to Prompting • AI as a Smart Intern Analogy • The 3 C's: Clarity, Context, Constraints • Advanced Prompting Techniques • Practical Application & Challenge
Meta Tags	AI prompting, ChatGPT, Google Gemini, AI communication, prompt engineering, AI skills, non-coder AI, effective prompts
Pre-requisite Tutorial	Basic familiarity with using a large language model (LLM) such as ChatGPT, Google Gemini, or Claude.

Slide : Welcome: Effective Prompting

Visual Cue	Narration
An AI robot hand holding a pen, writing on a notepad. Futuristic and clean design.	Namaste! Welcome to this tutorial on effective AI prompting. In today's world, communicating with AI is vital. Even without coding, this skill helps you use AI well.

Slide : What You Will Learn

Visual Cue	Narration
A collage of icons representing clarity (magnifying glass), context (thought bubble with background), and structure (building blocks or table icon).	In this session, you will learn to identify three important parts of a good AI prompt. You will learn to use techniques to get accurate AI answers. Finally, you will learn to make good prompts for different AI tasks.

Slide : Talk to AI, Get Results

Visual Cue	Narration
------------	-----------

A person interacting with a glowing, abstract AI interface, looking productive and satisfied. Soft, friendly digital light.	An AI model is like a super-smart, fast assistant, ready for any task! But like any assistant, it needs clear instructions. Your communication with AI directly impacts its output. This is where the skill of prompting becomes essential.
---	--

Slide : What is Prompting?

Visual Cue	Narration
A magnifying glass focusing on a text input box labeled 'Prompt' on a clean digital interface. The cursor is blinking.	Prompting is simply telling AI what to do. It's like talking, but you need to be very specific. A good prompt helps you get the right results from AI tools. This includes ChatGPT, Google Gemini, and other assistants. It requires both creativity and logical thinking.

Slide : AI: Your Smart Intern

Visual Cue	Narration
Illustration: A bright, curious, and eager intern or assistant, holding a notepad and pen, ready to take instructions. Friendly cartoon style.	To understand this, let's use an analogy. Think of an AI model as your new, very bright intern. This intern is super-fast and knows a lot, but is also very literal. They will do exactly what you tell them, not what you just imply.

Slide : Vague Instructions, Vague Results

Visual Cue	Narration
Scene: A manager vaguely telling a confused intern, 'Make a report.' The intern looks puzzled, later presenting a stack of generic, unorganized papers. Cartoon style, showing mild frustration.	Now, imagine you tell your intern, 'Please make a report.' What happens? The intern, being literal, might give you a very basic, generic report. The result wasn't what you needed because your instructions were too vague. This is exactly like giving a weak AI prompt.

Slide : Clear Instructions, Great Results

Visual Cue	Narration
------------	-----------

Scene: The manager clearly giving detailed instructions to the intern. The intern nods confidently, then presents a well-structured, relevant, and visually appealing report. Cartoon style, showing positive outcome.	But what if you give clear instructions? For example, you could say: 'Create a report on the top three benefits of electric cars.' State it's for your sustainable living blog. Request it be under 400 words and in a friendly tone. Now, your intern knows exactly what to do and gives a perfect report!

Slide : The 3 C's for AI: Clarity, Context, Constraints

Visual Cue	Narration
Split screen: Left side shows a weak, vague prompt example. Right side shows an excellent prompt example, with keywords like 'Clarity', 'Context', 'Constraints' highlighted visually next to relevant parts of the prompt.	AI works the same way. Good prompts follow three C's: Clarity, Context, and Constraints. Clarity means being specific. Context tells the AI why and for whom. Constraints set rules for elements like length or format. These C's help make sure AI gives you exactly what you need.

Slide : Go Deeper: Advanced Prompting

Visual Cue	Narration
An AI assistant icon wearing different 'hats' representing personas (e.g., chef, doctor). On the other side, a blueprint or table design showing structured output. Dynamic and illustrative.	You can go even further by giving the AI a 'persona'. For example, instruct it to 'Act as a fitness coach'. You could also structure the output, for example, by asking for a table. For a full example, combine these techniques. First, instruct the AI to act as a fitness coach. Next, ask it to create a 3-day workout plan for beginners. Finally, request the output as a table with columns for Day, Exercise, and Duration.

Slide : Key Takeaways

Visual Cue	Narration
An infographic representing the concepts. A central 'Brain' icon with radiating lines connecting to icons for Clarity, Context, Constraints, Persona, and Structured Output, all leading to 'Excellent AI Results'.	In summary, effective prompting means using clarity, context, and constraints for your AI. Using personas and structured output makes your results better. Remember, effective communication with AI is a powerful skill. Practicing regularly is key to getting great results!

Slide : Your Turn: Practice Prompting

Visual Cue	Narration
A user sitting at a computer, looking thoughtful. On the screen, a text input box with a blinking cursor is visible, ready for a prompt. The user is actively thinking.	Now for your assignment, open any AI tool. Imagine needing a simple 3-day healthy meal plan for a student. Craft a prompt. It should include a persona and apply the three C's. Also, request the output in a table format. Experiment with it and see the great results!
