

Spoken Tutorial – The 3 C's of Effective Prompts

Title: The 3 C's of Effective Prompts

Module	Mastering Prompt Engineering
Episode	Crafting Clear Prompts
Learning Objective	At the end of this tutorial learner will be able to 1. Understand the importance of Clarity in prompt engineering. 2. Identify how Context influences AI responses. 3. Apply Constraints to refine AI output. 4. Compare prompt examples to improve effectiveness.
Approx. Duration	2-3 minutes
Outline	• What are the 3 C's of Effective Prompts? • Clarity: Reducing Ambiguity • Context: Guiding Tone and Purpose • Constraints: Defining Length and Format • Applying the 3 C's: Examples
Meta Tags	Prompt Engineering, AI, LLM, Effective Prompts, ChatGPT, Gemini, Prompting, Clarity, Context, Constraints
Pre-requisite Tutorial	Basic understanding of what AI and LLMs are.

Script

Visual Cue	Narration
A friendly **AI** robot welcoming, with a digital interface.	Namaste. Welcome to this episode. We will explore effective AI prompts.
A checklist or a mind map showing learning goals.	Today, we will learn about the 3 C's. We will understand Clarity , Context , and Constraints . You will also apply these principles.
Icons for a computer, internet, and a web browser.	You will need a device to access AI tools. An internet connection is also needed. Use any modern web browser.
A brain icon with a lightbulb, representing prior knowledge.	You should know what AI is. A basic idea of LLMs will also help. This will make learning easier.
Three distinct icons representing Clarity, Context, and Constraints, arranged in a visually appealing way.	QUESTION: What makes an AI prompt truly good? EXPLAIN: Good prompts get good answers. We use the 3 C's for this. They are Clarity , Context , and Constraints . TRANSITION: Let us see what each C means. EXAMPLE: Think of asking a friend for directions. Vague instructions lead to confusion. Clear ones lead to the right place. REFLECT: You saw how good instructions help. APPLY: Now, let us start with Clarity .

A magnifying glass focusing on a clear word, contrasting with a blurry word.	QUESTION: Why is being clear important for an AI? EXPLAIN: AI follows instructions literally. Ambiguous words confuse it. Clear prompts give precise results. TRANSITION: Let us look at an example. EXAMPLE: If you say "tell me about a large animal," AI might pick an elephant. If you say "tell me about the largest land mammal," it is specific. REFLECT: Did the AI choose the animal on its own? Or did your words guide it? APPLY: We can make our prompts less ambiguous.
A thought bubble with different scenarios or roles (e.g., teacher, student, scientist) around a central topic.	QUESTION: How can AI understand our goal without more information? EXPLAIN: Context tells the AI your role. It also defines the audience. This guides the AI's tone and style. TRANSITION: We will see this in action. EXAMPLE: Asking "Explain gravity" is one thing. Asking "Explain gravity to a 5-year-old" changes the AI's approach. The AI will use simple words. REFLECT: How did the same topic change? What made the AI adjust? APPLY: Adding context helps the AI tailor its response.
A ruler or a boundary line, with text inside and outside, showing limits.	QUESTION: What if we need a specific type of answer? EXPLAIN: Constraints set boundaries. They define length, format, or style. This helps the AI stay within limits. TRANSITION: Let us try a scenario. EXAMPLE: Asking "Write about healthy eating" is broad. Asking "Write a 50-word poem about healthy eating" sets clear limits. The AI will write a poem. It will be 50 words. REFLECT: You guided the AI to a specific output. How did the constraint help? APPLY: Using constraints makes outputs predictable.
A split screen showing a "bad" prompt and a "good" prompt with clear differences in results.	QUESTION: Can we improve a basic prompt? EXPLAIN: Let us take a simple prompt. We will add Clarity, Context, and Constraints. See the improvement. TRANSITION: Here is an example. EXAMPLE: Bad Prompt: "Tell me about cars." (Too vague) Better Prompt: Clarity: Explain the benefits of electric cars. Context: For someone considering buying one. Constraints: In three bullet points. REFLECT: Notice the difference in the expected output. Which prompt will give a more useful answer? APPLY: Always think of the 3 C's when writing prompts.
A simple infographic summarizing Clarity, Context, and Constraints.	We learned about Clarity. This makes prompts unambiguous. We also covered Context. This guides the AI's role and tone. Finally, Constraints help control output format.
A notepad and a pencil, symbolizing a task.	Think of a task you want an AI to do. Write two prompts for it. One prompt should be basic. The second one should use the 3 C's.
The **EduPyramids** logo, possibly with **SINE** and **IIT Bombay** logos.	Thank you for joining this session. This module was brought to you by EduPyramids. We are powered by SINE, IIT Bombay.
