

Spoken Tutorial – Mastering AI Prompts: The 3 C's

Title: Mastering AI Prompts: The 3 C's

Module	AI Fundamentals
Episode	Effective Prompt Engineering
Learning Objective	At the end of this tutorial learner will be able to 1. Understand the importance of clear communication with AI. 2. Learn to apply Clarity, Context, and Constraints for better AI outputs. 3. Compare outputs from weak and strong prompts. 4. Identify opportunities to use the 3 C's in your daily AI interactions.
Approx. Duration	3-4 minutes
Outline	• The 3 C's of Effective Prompts • Clarity for reducing ambiguity • Context to guide tone, purpose, and audience • Constraints for length, format, and style • Examples showing improvement through the 3 C's
Meta Tags	AI, Prompt Engineering, ChatGPT, Gemini, LLM, AI Communication, Productivity
Pre-requisite Tutorial	Basic understanding of what AI is and how to use common AI tools like ChatGPT or Gemini .

Script

Visual Cue	Narration
	Welcome to our module on Effective Prompt Engineering. We are excited to have you here. Today, we will learn how to talk to AI better. This will help you get accurate results. Let us begin our learning journey.
	Today, we will understand clear AI communication. You will learn to apply the 3 C's for better AI outputs. We will compare weak versus strong prompts . You will identify chances to use the 3 C's daily.
	You will need a device with internet access. Any modern web browser will work. Please ensure you have a stable connection. This allows for smooth learning.
	You should know what AI is. A basic idea of using AI tools is helpful. Familiarity with ChatGPT or Gemini is a plus. No advanced technical skills are needed.
	What makes an AI prompt effective? A good prompt gets good results. A weak prompt gives weak answers. We use the 3 C's: Clarity , Context , and Constraints . These help us talk to AI better. Let us explore each 'C' now.

	Can an AI read your mind? No, it follows instructions literally. Vague instructions lead to vague answers. Clarity removes confusion. It tells the AI exactly what you want. Let us see how this works.
	Open any AI tool. Type 'Write something.' in the message box. Now click Submit . Notice the generic output. It is not very useful. This is due to lack of Clarity .
	Now, type 'Write a short email about a team meeting.' in the message box. Click Submit . See the difference? The output is more focused. We added Clarity to our prompt . Now, let us move to Context .
	Why is background information important? Context helps the AI understand your goal. It guides the tone, purpose, and audience. Think of it like giving directions to a friend. You tell them where you are going. Let us view an example.
	Let us use our improved email prompt . Type 'Write a short email for a client about a meeting, in a formal tone.' Click Submit . Observe how the tone changes. The AI now understands the audience. It also knows the desired tone. We will now add Constraints .
	Why do we need limits? Constraints define the output's boundaries. They control length, format, and style. This prevents the AI from rambling. It keeps the answer focused. Let us add Constraints to our prompt .
	Take our prompt with Clarity and Context . Type 'Write a short email for a client about a meeting, in a formal tone. Limit to 50 words.' Click Submit . See how the length is controlled. The AI follows our rules. We have used all 3 C's now.
	Let us start with a poor prompt . Open your AI tool. Type 'Tell me about India.' Click Submit . The AI gives a very broad overview. It is informative but not specific. This lacks all three C's.
	Now, let us add Clarity . Type 'Tell me about the history of IIT Bombay .' Click Submit . The AI now focuses on a specific topic. The output is much more relevant. We are getting closer to a good prompt .
	Let us add Context now. Type 'Tell me about the history of IIT Bombay for a university student looking to apply there.' Click Submit . The AI tailors the information. It highlights aspects relevant to an applicant. This shows the power of Context .

	Finally, let us add Constraints. Type 'Tell me about the history of IIT Bombay for a university student looking to apply there. Limit to 100 words and use bullet points.' Click Submit. The output is concise and structured. This is a powerful prompt. You can now make your own powerful prompts.
	Today, we learned about the 3 C's. Clarity makes instructions clear. Context guides the AI's understanding. Constraints control the output's form. Using these makes your AI interactions effective. Practice these for better results.
	Think of a task you want an AI to do. Write three prompts for it. First, a weak prompt. Second, a prompt with Clarity. Third, a prompt with all 3 C's. Compare the outputs. Share your findings with a friend.
	Thank you for joining this session. We hope you found it useful. This module was brought to you by EduPyramids. We empower learning with AI and technology. For more modules, visit EduPyramids.com.
