

Spoken Tutorial – The 3 C's of Effective Prompts

Title: The 3 C's of Effective Prompts

Module	Prompt Engineering Fundamentals
Episode	Crafting Clear and Effective Prompts
Learning Objective	At the end of this tutorial learner will be able to 1. Understand the significance of Clarity, Context, and Constraints in AI prompts. 2. Apply the principles of Clarity to reduce ambiguity in your AI interactions. 3. Identify how adding Context can guide the AI's tone, purpose, and audience. 4. Learn to use Constraints for defining specific length, format, and style in AI outputs.
Approx. Duration	3-4 min
Outline	• The 3 C's of Effective Prompts • Clarity for reducing ambiguity • Context to guide tone, purpose, and audience • Constraints for length, format, and style • Examples showing improvement through the 3 C's
Meta Tags	AI, Prompt Engineering, ChatGPT, Gemini, LLM, Prompting, Clarity, Context, Constraints
Pre-requisite Tutorial	Basic understanding of how to interact with AI tools like ChatGPT or Gemini .

Script

Visual Cue	Narration
A welcoming visual with a smiling instructor and a whiteboard showing '3 C's of Prompts', digital art, vibrant colors.	Welcome to this EduPyramids session. Today, we explore 'The 3 C's of Effective Prompts'. We will learn to craft better instructions for AI .
A list of bullet points with icons, representing learning objectives, abstract, educational theme.	Understand the significance of Clarity, Context, and Constraints in AI prompts . Apply the principles of Clarity to reduce ambiguity. Identify how adding Context can guide the AI's tone. Learn to use Constraints for specific length and format.
A laptop and a smartphone connected to the internet, showing various AI tool logos, minimalist, technology theme.	You will need a device with internet access. Access to any AI tool like ChatGPT or Gemini is helpful. This allows you to practice alongside us.
A simple diagram showing a user typing into an AI chat interface, with a basic knowledge icon, clean design.	You should have a basic understanding. This includes how to interact with AI tools. No advanced technical knowledge is needed.

Three distinct icons representing Clarity (a clear magnifying glass), Context (a speech bubble with surrounding elements), and Constraints (a ruler or boundary), modern, infographic style.	How do we get better answers from AI ? We use the '3 C's' framework. These are Clarity, Context, and Constraints. They make your prompts strong and effective.
A road sign with two confusing, vague arrows pointing in different directions, contrasted with a clear, single arrow, cartoon style.	What does 'Clarity' mean for a prompt ? It means being specific and unambiguous. A vague instruction confuses the AI . Think of it like giving directions to a friend.
A screenshot of an AI chat interface with the prompt 'Tell me about India' typed in, showing a generic, broad response starting to appear.	Let us try a vague prompt . Open your AI tool. Type: 'Tell me about India.' Now, click Enter or Submit .
A side-by-side comparison of two AI chat outputs; one vague about India, the other specific about ISRO, highlighting the improved clarity.	Did you get a very general answer? Now, let us make it clear. Type: 'Explain the history of the Indian Space Research Organisation (ISRO).' See the difference in the output.
A thought bubble with smaller icons inside: a person (who), a question mark (why), and an audience group, illustrating context elements, flat design.	Why is 'Context' important? Context tells the AI its role. It sets the tone and purpose. It also defines the audience for the output.
An AI chat interface showing the prompt with context: 'Act as a friendly science teacher. Explain the history of ISRO to a 10-year-old child.' The AI's response is in simple, engaging language.	Let us add context to our prompt . Imagine you are writing for children. First, type: 'Act as a friendly science teacher.' Next, add: 'Explain the history of ISRO to a 10-year-old child.' Notice the change in language and style.
A ruler and a checklist icon, symbolizing rules and boundaries, with a text box showing specific formatting, geometric style.	What are 'Constraints'? These are rules for the AI 's output. They define length, format, and style. Constraints ensure the output meets your exact needs.
An AI chat interface with the prompt including constraints: 'Act as a friendly science teacher. Explain the history of ISRO to a 10-year-old child in 3 bullet points.' The AI's response is a concise bulleted list.	Let us add constraints to our prompt . We want a short, bulleted list. First, type: 'Act as a friendly science teacher.' Next, type: 'Explain the history of ISRO to a 10-year-old child.' Then, add the constraint: 'in 3 bullet points.' Observe how the AI follows the format.
A simple, vague prompt 'Write about space' typed into an AI chat, showing a very broad and unhelpful response, demonstrating a weak prompt.	Let us see all three C's in action. Start with a weak prompt : 'Write about space.' This is too general. The AI cannot guess your intent.

A revised prompt 'Write about the importance of space exploration for humanity' in the AI chat, showing a more focused but still generic response.	First, add Clarity. 'Write about the importance of space exploration for humanity.' This is better. The AI now has a clearer topic.
The final, fully refined prompt with Clarity, Context, and Constraints, and a highly specific, well-formatted response from the AI, showcasing the optimal output.	Now, let us add Context and Constraints. First, type: 'Act as a futurist.' Next, add: 'Write a 100-word paragraph for a science magazine.' Finally, include: 'on the importance of space exploration for humanity.' See the precise, tailored output. This is the power of the 3 C's.
An infographic summarizing Clarity, Context, and Constraints with their key definitions, using icons and bold text, educational, clean design.	We learned about Clarity, Context, and Constraints. Clarity makes your prompt specific. Context guides the AI 's role and tone. Constraints define the output's structure. Mastering these improves your AI interactions.
A notebook with a pen, next to a laptop showing an AI chat, with a 'To-Do' list icon, encouraging practice.	Choose any topic you like. Write a prompt using all three C's. Ensure Clarity, Context, and Constraints are present. Test it in your preferred AI tool. Share your experience with a friend.
The EduPyramids logo prominently displayed, with a 'Thank You' message in a clean, professional style, possibly with a subtle background of digital pyramids or tech elements.	Thank you for joining this EduPyramids session. We hope you found this helpful. Continue exploring the world of AI . Visit EduPyramids for more learning.
