Title Slide	Welcome to this Spoken Tutorial on The 3 C's of Effective Prompts.
Learning Objectives Slide	In this tutorial, you will learn to understand the importance of the 3 C's in prompt engineering, identify how Clarity reduces ambiguity in AI interactions, apply Context to guide AI responses for specific needs, and compare the impact of adding Constraints on AI output.
System Requirements Slide	You will need a device with internet access. Access to any AI chatbot, such as ChatGPT or Gemini , is recommended for practice.
Pre-requisite Slide	Familiarity with basic computer operations is helpful. A general idea of how to type and submit text to an AI is sufficient.

A person thinking about how to ask a question to an AI chatbot	What makes an AI give a perfect answer? It is all about how you ask the question. We use the 3 C's for effective prompts. These are Clarity, Context, and Constraints. Next, let us explore Clarity.
A magnifying glass highlighting a clear, concise sentence	Why is Clarity important? An AI follows instructions literally. Vague instructions lead to vague answers. Clarity means being specific and direct. It removes any confusion for the AI. Let's see an example.
Two AI chatbot screens, one with a vague prompt and a general answer, the other with a clear prompt and a specific answer	Open any AI tool. Type: 'Write about dogs.' Press Enter or Submit. Notice the general output. Now, type: 'Write a short paragraph about the benefits of owning a Labrador dog for families.' Press Enter or Submit. See the difference in specificity? This is the power of Clarity.
A person giving directions to another person, showing the importance of context	How does the AI know what kind of answer you need? This is where Context comes in. Context sets the scene for the AI. It tells the AI about the purpose and audience. It helps the AI choose the right tone. Let's look at Context with an example.
An AI chatbot explaining photosynthesis in two different ways, one complex, one simple for a child	Think of a simple prompt: 'Explain photosynthesis.' The AI might give a scientific explanation. Now, add Context: 'Explain photosynthesis to a five-year-old child.' Type this into your AI tool. Press Enter or Submit. Observe how the language simplifies. This shows how Context guides the AI's response.
A ruler and a pen, symbolizing limits and structure	What if you need a specific type of answer? This is when Constraints are useful. Constraints define the boundaries of the answer. They specify length, format, or style. For instance, you can ask for a bulleted list. Let us try adding Constraints.

An AI chatbot outputting a bulleted list explaining photosynthesis to a child	Take our previous prompt: 'Explain photosynthesis to a five-year-old child.' Now, add a Constraint: 'Explain photosynthesis to a five-year-old child in three bullet points.' Type this into your AI tool. Press Enter or Submit. Notice the structured output. Constraints shape the output precisely.
A person writing a prompt on a piece of paper, starting with a simple idea	Let us combine all three C's. Start with a vague prompt: 'Write about fruits.' This lacks Clarity, Context, and Constraints. It will give a very general answer. Now, we will make it better, step by step.
A series of three AI chatbot inputs, showing the prompt evolving from vague to clear, with context and constraints	First, add Clarity: 'Write about the health benefits of apples.' Next, add Context: 'Write about the health benefits of apples for an article in a health magazine.' Finally, add Constraints. Prompt: 'Write a 100-word paragraph on apple health benefits for a health magazine.' Type this complete prompt into your AI tool. Press Enter or Submit. Compare this output to our first vague prompt. The difference is significant.
Summary Slide	In this tutorial, you learned about the 3 C's of effective prompts. Clarity makes your instructions specific. Context guides the AI's tone and purpose. Constraints define the output's format and length. Using all three C's improves AI responses greatly.
Assignment Slide	Your task is to choose a simple topic. Write three different prompts for it. One with only Clarity. One with Clarity and Context. One with Clarity, Context, and Constraints. Compare the AI outputs and reflect on the differences.
