Title Slide	Welcome to this Spoken Tutorial on Mastering Persona Prompting in AI .
Learning Objectives Slide	In this tutorial, you will learn to understand what persona prompting is, identify how personas influence AI responses, apply different personas in your prompts , and evaluate the benefits of using persona prompting .
System Requirements Slide	You will need a device with internet access. Any modern web browser will work. Access to an AI chatbot like Gemini or ChatGPT is recommended.
Pre-requisite Slide	You should have a basic understanding of AI . Familiarity with writing simple prompts is also helpful.
A person wearing different hats, representing different roles or personas.	Have you ever wanted your AI to sound like an expert? Persona prompting assigns a role to the AI . You tell the AI to 'Act as...' someone specific. This shapes the AI 's responses. Let us see how this works.

Two different **AI** chatbot interfaces showing different tones of response, one generic, one authoritative.	Imagine you ask an AI for medical advice. Without a persona, the answer might be generic. Now, ask it to 'Act as a doctor.' The AI 's tone becomes formal and authoritative. Its expertise reflects a medical professional. This changes the quality of information.
A chef in a kitchen, with a thought bubble showing a recipe.	Let us try some practical examples. Open your favorite AI tool. Type: 'Act as a chef. Give me a recipe for a simple dal.' Notice the ingredients and cooking steps. The AI provides a chef's perspective. It might suggest specific techniques.
A person writing poetry under a rainy window, with a thought bubble showing a poem.	Now, try 'Act as a poet. Write a short poem about rain.' Observe the language and imagery. The AI uses poetic devices. It creates a different kind of output. This shows the power of personas. Reflect on how different personas guide the AI .
A toolbox with different tools, each labeled with a persona (e.g., doctor, lawyer, artist), representing specialized uses.	When is persona prompting useful? It is great for specific domains. For example, legal, medical, or creative writing. It helps you get targeted answers. It also ensures consistent style and tone. Use it to refine your AI 's output for better results.
Summary Slide	In this tutorial, you learned what persona prompting is. You saw how assigning roles influences AI responses. We explored practical examples. Finally, we discussed the benefits of using personas. This technique helps tailor AI output.
Assignment Slide	Your assignment is to experiment with different personas. Choose three distinct roles. For each role, ask the AI the same question. For example, 'Explain photosynthesis.' Compare the three responses. Notice how the persona changes the explanation.
