

Spoken Tutorial on API

Module	Module 3: An introduction to Building
Episode	3. Understanding APIs
Learning Objective	At the end of this tutorial learner will be able to 1. Define what an API is. 2. Explain the role of an API Key. 3. Identify components of an API Request.
Approx. Duration	3-4 min
Outline	• API Analogy • API Key • API Request
Meta Tags	API, Application Programming Interface, AI, models, requests, API Key, authentication, programming, software, development, tutorial, spoken tutorial
Pre-requisite Tutorial	Module 2:Art of the Prompt

Script

Visual Cue	Narration
Title Slide	Welcome to this Spoken Tutorial on API .
Learning Objectives Slide	In this tutorial, you will learn to, • Define what an API is. • Explain the role of an API Key. • Identify components of an API Request.
System Requirements Slide	Here I am using a browser on a computer or mobile.
Pre-requisite Slide	To follow this tutorial, you should have completed Module 2: Art of the Prompt .
Illustration showing an API as a waiter taking orders to a kitchen (model) and bringing food (response) back to a customer (application).	What is an API ? An API is an Application Programming Interface . It acts as a messenger for your applications. Think of an API like a waiter in a restaurant. You give your order to the waiter. The waiter takes it to the kitchen. Then, the waiter brings your food back to you. Similarly, an API takes your request to a model . It then brings the model's response back. This response is delivered to your application.

Illustration showing a key unlocking a lock, with a person holding an ID card, representing an API Key for authentication.	Now, what is an API Key? An API Key is a secret password. It identifies you as an authorized user. Imagine it like your restaurant ID card. This card shows you are allowed to order food. Your API Key ensures only you can use the API. It is very important to keep your API Key private. Always keep it secure.
Illustration showing a user typing a request on a computer, with a key icon for authentication, sending it to a server (model) and receiving a response.	How do you make an API Request? An API Request is like placing your order at the restaurant. You send your instructions to the model. This request includes your API Key. The API Key is for authentication. It confirms you are the authorized user. Your prompt or instruction is also part of the request. The API then delivers this to the model. The model processes your instruction. It then sends back the result.
Summary Slide	Let us summarize what we learned. We defined APIs as messengers. They carry requests and responses. API Keys are identifiers. They ensure secure access. We also learned to make an API Request. This involves sending your API Key and prompt.
Assignment Slide	Now, for an assignment, think about other real-world scenarios. Where might an API-like interaction be happening? Share your thoughts on this.
