

Spoken Tutorial on Your First AI Application

Module	An introduction to Building
Episode	3. Your First AI Application
Learning Objective	At the end of this tutorial learner will be able to 1. Define what an API is. 2. Explain how to obtain an API key. 3. Apply the Gemini API to build a simple AI application. 4. Identify the components of an AI application script.
Approx. Duration	3-4 min
Outline	• What is an AI Application? • Understanding APIs • Getting Your API Key • Setting Up Google Colab • Configuring the API • Crafting Your AI Prompt • Generating and Printing Slogans • Running Your AI Application
Meta Tags	AI application, Gemini API, Python, Google Colab, API key, marketing slogans, generative AI, programming, tutorial, hands-on, AI Studio, coding
Pre-requisite Tutorial	Episode 1 and 2 of this Module

Script

Visual Cue	Narration
Title Slide	Welcome to this Spoken Tutorial on Your First AI Application .
Learning Objectives Slide	In this tutorial, you will learn to, • Define what an API is. • Explain how to obtain an API key. • Apply the Gemini API to build a simple AI application. • Identify the components of an AI application script.
System Requirements Slide	Here I am using a browser on a computer or mobile.
Pre-requisite Slide	To follow this tutorial, you should have completed Episode 1 and 2 of this Module.

Illustration showing AI application as a smart assistant, like a chef creating a dish	What is an AI application? It uses artificial intelligence to perform specific tasks. Think of it like a smart assistant. It understands your requests and generates responses. Imagine a chef creating a dish using ingredients and recipes. An AI application works in a similar way.
Illustration showing API as a waiter taking an order to the kitchen (AI model) and bringing back food (AI's response)	Now, let's understand APIs. An API, or Application Programming Interface, acts as a messenger. It allows different software applications to communicate. Imagine an API as a waiter in a restaurant. The waiter takes your order, which is a request. He brings it to the kitchen, which is the AI model. Then, he brings back your food, which is the AI's response.
Browser showing Google AI Studio interface, highlighting 'Get API key' button	First, navigate to Google AI Studio. Sign in with your Google account. Then, click 'Get API key'. This will create a new key. I am copying this key.
Screen close-up: user typing '!pip install -q -U google-generativeai' in Google Colab	Open a new Google Colab notebook. Install the <code>`google-generativeai`</code> package. Type <code>`!pip install -q -U google-generativeai`</code>. Then, import this package.
Screen close-up: user replacing 'YOUR_API_KEY' and initializing 'gemini-pro' model in Google Colab	Configure the API with your copied key. Replace <code>`YOUR_API_KEY`</code> in the code. Use your actual API key. Then, initialize the <code>`gemini-pro`</code> model.
Screen close-up: user typing 'product_topic = "a new brand of eco-friendly sneakers"' and the prompt variable in Google Colab	Now, let's craft your AI prompt. Define your product topic. For example, <code>`product_topic = "a new brand of eco-friendly sneakers"`</code>. Then, create your prompt. It could be <code>`prompt = f"Create 5 catchy marketing slogans for {product_topic}"`</code>.
Screen close-up: user typing 'response = model.generate_content(prompt)' and 'print(response.text)' in Google Colab	Send your prompt to the model. Use <code>`response = model.generate_content(prompt)`</code>. Then, print the AI's response. Type <code>`print(response.text)`</code>.
Google Colab interface: user pressing play button, showing generated marketing slogans as output	Ensure your API key is correctly inserted. Press the play button next to the code block. This executes the script in Colab. See the generated marketing slogans.

Summary Slide	Let us summarize what we learned. We defined what an API is. We learned how to get an API key . Then, we built a simple AI marketing slogan creator. We used Python and the Gemini API in Google Colab .
Assignment Slide	Now as an assignment, Modify the `product_topic` variable. Generate slogans for a different product. Compare the results.
