

Spoken Tutorial on Understanding API

Module	Module 3: An Introduction to Building with AI
Episode	2. Understanding API
Learning Objective	At the end of this tutorial learner will be able to 1. Define what an API is. 2. Explain the role of an API in AI applications. 3. Identify the components of an API interaction.
Approx. Duration	3-4 min
Outline	• Understanding API: The Restaurant Waiter Analogy
Meta Tags	API, Artificial Intelligence, AI development, prompt engineering, application programming interface, software integration, AI models, data exchange, programming, tutorial
Pre-requisite Tutorial	Module 2: Art of the Prompt

Script

Visual Cue	Narration
Title Slide	Welcome to this Spoken Tutorial on Understanding API.
Learning Objectives Slide	In this tutorial, you will learn to, • Define what an API is. • Explain the role of an API in AI applications. • Identify the components of an API interaction.
System Requirements Slide	Here I am using a browser on a computer or mobile.
Pre-requisite Slide	To follow this tutorial, you should have completed Module 2: Art of the Prompt.

Illustration showing API as a waiter in a restaurant, connecting a customer (app) to a kitchen (AI model).	Have you ever wondered how different apps talk to each other? Or how an app gets information from a large AI model? Imagine you are at a restaurant. You want to order some food, right? You don't go into the kitchen yourself to tell the chef. Instead, you tell the waiter what you want. The waiter takes your order to the kitchen. The chef prepares the food. Then, the waiter brings the food back to you. In this scenario, the waiter is like an API. An API, or Application Programming Interface, is a messenger. It allows different software applications to communicate. It takes your request and delivers it to another system. Then, it brings the response back to you. This is how your apps can use powerful AI models. Without an API, every app would need its own kitchen.
Summary Slide	Let us summarize what we learned. We defined what an API is. We explained its role in AI applications. And we identified API interaction components.
Assignment Slide	Now, for your assignment, consider this task: Think of an app you use daily. Identify a possible API interaction within it. Compare the results.
