Title Slide	Welcome to this Spoken Tutorial on Understanding API .
Learning Objectives Slide	In this tutorial, you will learn to, • Define what an API is. • Explain the role of an API in AI applications. • Identify how an API facilitates interaction with AI models.
System Requirements Slide	Here I am using a browser on a computer or mobile.
Pre-requisite Slide	To follow this tutorial, you should have completed Module 2: Art of the Prompt .
Illustration showing a restaurant waiter taking an order from a customer and delivering it to the kitchen, representing an API connecting an application to an AI model.	What exactly is an API ? An API acts as a messenger. It helps applications talk to AI models. Imagine an API is like a restaurant waiter. You give your order, which is a prompt . The waiter takes it to the kitchen, the AI model. The kitchen prepares your food, the AI response. The waiter brings it back to you. You don't need to know how the food is made. The API handles all communication for you.
Summary Slide	Let us summarize what we learned. We understood that an API acts as a messenger. It connects applications with AI models.

Assignment Slide	Now, here is an assignment for you. Think of another everyday analogy to explain how an API works. Compare the results.
