

Spoken Tutorial on Predictive vs. Generative AI

Module	AI Essentials
Tutorial	2. Predictive vs. Generative AI
Learning Objective	At the end of this tutorial learner will be able to 1. Define Predictive AI. 2. Define Generative AI. 3. Identify key differences. 4. Explain Transformer architecture.
Approx. Duration	3-4 min
Outline	• Demo: Predictive AI (E.g., Showing a forecast or classification result). • Demo: Generative AI (Watching a new piece of text or image being created). • The key difference in function (Classification vs. Creation). • The Transformer architecture breakthrough explained simply (context-awareness).
Meta Tags	AI, Predictive AI, Generative AI, Machine Learning, Deep Learning, Transformer, Classification, Creation, Forecasting, NLP, Context-awareness, AI Essentials
Pre-requisite Tutorial	Basic understanding of AI concepts. Please refer to our website for more detail.

Script

Visual Cue	Narration
Title Slide	Welcome to this Spoken Tutorial on Predictive vs. Generative AI .
Learning Objectives Slide	In this tutorial, you will learn to, • Define Predictive AI. • Define Generative AI. • Identify their key differences. • Explain the Transformer architecture.
System Requirements Slide	Here I am using a browser on a computer or mobile.
Pre-requisite Slide	To follow this tutorial, you should have a basic understanding of AI concepts. Please refer to our website for more detail.
Person at laptop, weather forecast map with rain and sun icons	What is Predictive AI ? It uses existing data to make informed predictions. Think of it like a weather forecast. It predicts rain or sun based on past patterns. Similarly, Predictive AI forecasts outcomes.

Screen close-up: email inbox with a spam email highlighted	Let's see a demo of Predictive AI. Imagine your email inbox. It classifies emails as spam or not spam. It learns from millions of past emails. This helps keep your inbox clean.
Person at laptop, digital artist painting on a tablet	What about Generative AI? It creates brand new, original content. Think of it like an artist painting. The artist creates a unique piece of art. Generative AI can create text, images, or music.
Screen close-up: user typing 'Write a short story about...' into a text generation AI	Now, let's watch Generative AI in action. We will give it a small prompt. See how it creates a unique story. Or perhaps even a poem. It shows its ability to produce new content.
Person using a mobile phone, online shopping app showing product recommendations and generated product descriptions	Let's see this in a real-life example. Open any online shopping app on your phone. Browse for a new shirt or a book. The app predicts items you might like. This is based on your past purchases. This is Predictive AI at work. It can also generate product descriptions. This describes new items for sale. That is Generative AI.
Side-by-side: left side showing items being sorted into bins (Predictive AI), right side showing an artist creating a new sculpture (Generative AI)	What is the key difference? Predictive AI classifies or forecasts existing data. Think of sorting items into bins. Generative AI creates entirely new content. Imagine an inventor making something new. It's classification versus creation.
Person at laptop, close-up of text being edited with highlighted connections, representing Transformer architecture	Let's talk about Transformer architecture. It's an AI breakthrough. It helps models understand context. Think of a meticulous editor. An editor understands text relationships. This makes AI models more effective.
Summary Slide	Let us summarize what we learned. We covered Predictive AI for prediction. We also learned about Generative AI for creation. We saw their core differences. Finally, we understood Transformer architecture for context-awareness.

Assignment Slide	Now as an assignment, Explore examples of Predictive AI in daily life. For instance, email filters. Also, find Generative AI examples like chatbots. Note their distinct functions. Compare the results.
